THE UNIVERSITY OF THE WESTERN CAPE
FACULTY OF LAW

DEVELOPING AN INDEPENDENT REGULATORY FRAMEWORK FOR THE FINANCIAL SECTOR IN MALAWI

LLM MODE I

A Research Paper submitted in partial fulfilment of the requirements for the degree of Magister Legum, University of the Western Cape, Cape Town, South Africa

STUDENT: Sunduzwayo Madise

STUDENT N°: 3082013

DEGREE: LL.M (International Trade, Investment and Business Law)

SUPERVISORS:

: Prof. Riekie Wandrag (University of the Western Cape)

: Prof. Kenneth Mwenda (Senior Counsel, Legal Vice-Presidency of the World Bank & Extraordinary Professor of Law, University of Pretoria)

2010 - 2011
DECLARATION

I, Sunduzwayo Madise, declare that Developing an Independent Regulatory Framework for the Financial Sector in Malawi is my own work, that it has not been submitted before for any degree or examination in any other university, and that all the sources I have used or quoted have been indicated and acknowledged as complete references.

Supervisor
DEDICATION

This work is dedicated to the following for their unique contribution to my life:

- My wife Rhosa, for her love, support and never-failing belief in me.
- My late father G P S Madise, for being an ever living inspiration.
- My mother Nyokase Madise, for never losing faith in me.
- My elder sister Prof. Nyovani Madise and younger brother Justice Mr. Dingiswayo Madise LLM for their inspiration and support.
- Prof. Riekie Wandrag, for her support, guidance and dedication both as my Supervisor and the LLM Program’s Course Coordinator.
ACKNOWLEDGEMENT

I would like to express my gratitude to Prof. Riekie Wandrag under whose supervision this work was prepared for her support, advice, time and for the opportunity granted to me to pursue the LLM. I also thank Prof. Kenneth K Mwenda who co-supervised this work and provided immeasurable linkages and resources. I also thank Prof. Danwood Chirwa for providing me with material for my research.

I also thank all the various professors, professionals and lecturers who taught us in this program but Dr. Edwini Kessie is singled out for building self-belief in us.

I would also like to acknowledge my classmates; Timothy Kyepa, Maryanne Macheru, Hilda Thopacu (Madam Class President), Cezanne Britain-Renecke, Adedayo Adedeji, Toby Moody, Egidius Mweyunge, James Madiga, Ala Runick Fru, Samuel Yeboah and Sadat Lunani. You were all such a bunch of fun to live with and challenged me in various ways. May we all go out and become good ambassadors of our alma mater, UWC!

I also thank tutors in the Faculty of Law at UWC with whom I worked, especially Camilla Yusuf, Cheslin Paris and Byron Fourie with whom I shared an office and to Bramley Lemine and Gracious Miti. I am further indebted to Adv. Kelly Sunkel under whom I worked as a tutor of Law of Insolvency for her understanding, support and for providing me with an opportunity to tutor this branch of law. I also thank Prof. Eric & Dr Lea Mwambene for their support and encouragement.

Finally to the University of Malaŵi, especially the following colleagues at the Faculty of Law for their unflinching support; Prof. Fidelis Kanyongolo, Dr. Ngeyi Kanyongolo, Mr. Thokozani Ngwira, Mr Chikosa Banda and to Prof. C Kamlongera, Principal and Mr. V Jedegwa Registrar of Chancellor College but most importantly to the Dr. E Fabiano, Vice Chancellor, Mr. B Malunga, Registrar and Mr. T Nampota Deputy Registrar of the University of Malaŵi for providing me with the leave to pursue this LLM Program and extending to me a scholarship offered by the Government of the Republic of Malaŵi.

CHAPTER ONE

1. Introduction

1.1 Historical context and state of affairs

Malaŵi\(^1\) gained independence from Britain in 1964 and became a Republic in 1966.\(^2\) As a Republic, it delinked its economy from Britain and set up its own financial system, with the Malaŵi Kwacha as the new currency. The Kwacha was however still fixed to the British Sterling Pound, up to 1973.\(^3\) However, to date, 47 years after political independence and 45 years after financial independence, Malaŵi remains one of the Least Developing Countries\(^4\) and poverty remains a key challenge.\(^5\) Progress has however, been made in tackling poverty and other social challenges.\(^6\)

Malaŵi’s developing financial sector remains small and dominated by banking.\(^7\) Capital markets are not fully developed and activity on the Malaŵi Stock Exchange (MSE)\(^8\) remains very limited.\(^9\) The central bank, Reserve Bank of Malaŵi (RBM) is the regulator\(^10\) of the financial services sector and its governor is the statutory registrar of the financial service sector.\(^11\) In an attempt to enhance the financial sector’s supervisory framework, Malaŵi has recently introduced amendments to the existing law, enacted new laws and drafted new bills to cover the financial services sector in Malaŵi.\(^12\) However all the amendments, new acts and proposed bills whilst

providing for a comprehensive regulatory framework still concentrates all regulatory and supervisory authority within the RBM.\textsuperscript{13}

1.2 Background

Over the years financial regulation and supervision in many countries have been organized around specialist agencies with distinct responsibilities for banking, securities and insurance sectors, however, there has in recent years, been a trend towards restructuring financial supervision and in particular towards unified regulatory agencies.\textsuperscript{14} Countries have gradually moved towards some form of unified regulation based on a twin peaks or multiple peaks model or even on a single peak model.\textsuperscript{15} The most notable single peak case is the Financial Services Authority\textsuperscript{16} (FSA) of the UK.\textsuperscript{17} A regulator may be partially unified or fully unified.\textsuperscript{18} The term single regulator commonly refers to a fully unified regulator.\textsuperscript{19}

In Malawi the RBM is the single regulator. It regulates and supervises all financial sectors including banks, pension services, insurance companies, discount houses and the MSE. The RBM employs the \textit{silo} matrix\textsuperscript{20} of financial services regulation and supervision.

Institutional aspects of financial regulation and supervision are receiving great attention around the world.\textsuperscript{21} Protecting investors to help build confidence in the market, ensuring that markets are fair, efficient and transparent, reducing systemic risk (contagion), protection against malpractices such as money laundering, insider

trading etc. and maintaining consumer confidence in the financial system comprise the broad objectives of regulation. A key objective of regulations is to redress information imbalances that sometimes exist between financial services businesses in favour of the consumer. Control of market abuses boosts consumer confidence. However, before designing any framework, the size and structure of the industry and the role of the regulator need to be understood. It is also important to take into consideration the economic, political, legal and historic considerations when designing a regulatory framework.

**Malaŵi** is a Constitutional supremacy with three arms of government viz; executive, legislature and judiciary. The RBM is a creature of statute and a constitutional body. Section 3 of the RBM Act 1989 states that among the principal objectives of the RBM shall be to supervise banks and other financial institutions.

The RBM has the statutory authority to supervise banks and other financial institutions. The RBM Act defines financial institution ‘as any person, other than a bank, registered as a financial institution under the Banking Act’ and other financial institutions ‘includes financial institutions and pensions, assurance and insurance institutions’. The Financial Services Act 2010 broadens the definition of a financial institution to include a bank, and institutions defined as such in the Securities Act 2010, Insurance Act 2009, Microfinance Act 2010, Financial Cooperatives Act [sic], Pension Act [sic], Credit Reference Bureau

---

26 i.e. Constitution and whether the country is a Common law or Civil law or both (as in the case of Cameroun).
30 The Reserve Bank of Malaŵi (RBM) Act 1989 (hereafter RBM Act or RBMA)
31 Section 185(1) of the Republic of Malaŵi Constitution states ‘There shall be established by an Act of Parliament a central bank of the Republic, known as the Reserve Bank of Malaŵi which shall serve as the State's principal instrument for the control of money supply, currency and the institutions of finance and shall serve generally in accordance with the normal functions of a central bank’.
32 Section 2 RBM Act.
33 Hereafter referred in the text as Financial Services Act or FSAM.
34 Hereafter referred in the text as Securities Act or SA2010.
35 Hereafter referred in the text as Insurance Act or IA2009.
36 Hereafter referred in the text as Microfinance Act or MFA2010.
37 Although it is stated as an “Act” in the Financial Services Act, the Financial Cooperatives Bill is yet to be enacted according to law.
Act 2010\textsuperscript{39} and the Building Society Act 1964\textsuperscript{40}. This definition basically includes any institution\textsuperscript{41} dealing in financial or financial-like services in Malawi.

The RBM exercises its regulatory and supervisory authority under the following legislation:

(a) The Reserve Bank of Malawi Act\textsuperscript{42}
(b) The Banking Act 2009\textsuperscript{43}
(c) The Securities Act\textsuperscript{44}
(d) The Exchange Control Act\textsuperscript{45}
(e) Microfinance Act\textsuperscript{46}
(f) Insurance Act\textsuperscript{47}
(g) Credit Reference Bureau Act\textsuperscript{48}
(h) Building Society Act\textsuperscript{49}
(i) Financial Services Act\textsuperscript{50}

The following Bills have been laid before Parliament and passed\textsuperscript{51} and are likely to become part of the financial services law in the near future:

(a) Pension Bill\textsuperscript{52}

\textsuperscript{39} Although it is stated as an “Act” in the Financial Services Act, the Pensions Bill is yet to be enacted according to law.

\textsuperscript{38} Hereafter referred in the text as Building Society Act or BSA.

\textsuperscript{40} Section 2 Financial Services Act.

\textsuperscript{41} Both juristic and natural persons.

\textsuperscript{43} Hereafter referred as the Banking Act or BA2009. It replaced the Banking Act, 1989 (hereafter the repealed Banking Act. However although s 1 states that the Act shall be cited as the Banking Act, 2009, it is Act No 10 of 2010. The Financial Services Act in s 2 refers to it as the Banking Act 2010[sic]. Text available at \url{http://www.rbm.mw/documents/legislation/Banking%20Act%202010.pdf} (accessed 1 February 2011).

\textsuperscript{44} Which has just replaced the Capital Market Development Act, chap 46 :06 of the Laws of Malawi. The repealed Act can is still available at \url{http://www.rbm.mw/general_info/docs/CAPITAL%20MARKET%20DEVELOPMENT%20ACT.pdf} (accessed 1 February 2011).

\textsuperscript{45} Chapter 45 :01 of the Laws of Malawi available at \url{http://www.rbm.mw/documents/legislation/EXCHANGE%20CONTROL%20ACT.pdf} (accessed 1 February 2011) – a new Bill has been laid before Parliament to replace this Act.

\textsuperscript{46} A new law.

\textsuperscript{47} Which has just replaced the Insurance Act; chap 47:01. However although s 1 states that the Act shall be cited as the Insurance Act, 2009, it is Act No 9 of 2010. The Financial Services Act in s 2 refers to it as the Insurance Act 2010.

\textsuperscript{48} A new law.

\textsuperscript{49} Chapter 32:01 of the Laws of Malawi.

\textsuperscript{50} A new law, being the umbrella Act of all financial service laws, text available at \url{http://www.rbm.mw/documents/basu/FINANCIAL%20SERVICES%202010.pdf} (accessed 1 February 2011).

\textsuperscript{51} Awaiting Presidential Assent and publication in the Gazette – see s 49 Constitution.
(b) Financial Cooperatives Bill

(c) Reserve Bank Amendment Bill

The Financial Services Act defines all the above Acts and Bills except the Exchange Control Act (and the Amendment Bill) as forming the “financial services law.”

The governor and deputy governor of the RBM are appointed exclusively by the President of Malawi. The board of directors of the RBM is also appointed exclusively by the President and comprises the governor, deputy governor, and five other directors who may include secretary to the treasury, secretary for economic planning and development and accountant general. The governor (or deputy governor in the governor’s absence) chairs the board of directors. The RBM is thus de facto and de jure under the executive.

Malawi has been a one-party state for most of its existence. Through a referendum in 1993, Malawians voted for a multiparty system and in 1994 Malawi had multiparty elections with a new Constitution in place and presidential term that runs for five years with a maximum of two terms. Malawi has had three Presidents since it became independent; Dr. Kamuzu Banda, Dr. Bakili Muluzi and Professor Bingu wa Mutharika.

---

52. A new law to regulate the Pension Industry. The law will make pension (contributions) compulsory.
53. To replace the Savings and Credit Cooperatives Act.
54. Awaiting Presidential assent which is by law required in Malawi before a Bill which has been laid down, debated and passed by Parliament can become law – s 73 The Constitution.
55. This Act controls operation of Forex Bureaux which were established after subsidiary legislation - Exchange Control (Forex Bureaux and Foreign Exchange Fixing Sessions) Regulation of 1994
56. Hereafter abbreviated to FSL for both the singular and plural forms s 2 Financial Services Act. The author is of the view that the omission of the Exchange Control Act is by error and not design.
57. Section 12 RBM Act; s 6 of the RBM Amendment Bills proposed the appointment of not more than three deputy governors (up from the present one) and not more than seven directors – Sonani B ‘Cut President’s powers over RBM – MPS’ The Nation 10 December 2010 available at http://www.nationmw.net/index.php?option=com_content&view=article&id=10828:cut-presidents-powers-over-rbmmps&catid=11:business-news&Itemid=4 (accessed 13 December 2010).
58. And usually does!
59. Section 6 RBM Act.
60. Section 11 RBM Act.
61. From 1966 when it became a Republic to 1994. There were minority parties when Malawi became independent in 1964 following the general elections of 1961 but this changed after 1966 and following the (in)famous “cabinet crisis” when Dr. Banda reinforced his reigns on power.
62. Although the Constitution is designated as a 1994 legislation, the 1994 Constitution was interim and was only made sacrosanct in 1995, the notable removal from it being the senate.
63. Section 83 The Constitution.
64. 1964-1994.
66. 2004-present (constitutionally up to 2014).
The RBM has had eleven governors since its inception in 1965. The average term of a governor since independence is approximately 4.7 years, almost equal to the 5-year post-one-party political cycle. The longest serving governor of the RBM was Mr. John Tembo who served during the period of one-party rule. The shortest serving is A.G. Perrin who was the first governor and only served a year. An examination of the rate of turnover of governors after the advent of multiparty democracy indicates a drop to 4.5 years on average. The most interesting pattern is that there is a change in the governor within a year after every general election in the multiparty era. For example, Dr. Mathews Chikaonda replaced Mr. Francis Perekamoyo as governor in 1995 soon after the 1994 elections. Dr. Chikaonda was replaced by Dr. Elias Ngalande in 2000 after the 1999 elections whilst Dr. Ngalande himself was replaced by Mr. Victor Mbewe in 2005 after the 2004 elections. Mr. Mbewe was replaced by the current governor, Dr. Perks Ligoya, months after the May 2009 general elections.

The influence of the executive arm (especially the presidency) on the RBM through the appointment of its governor and board is therefore self-evident, especially in the post-one-party era where each presidential term seems to coincide with a new governor of the RBM. It can therefore be inferred that, currently the job of governor of the RBM does not provide much security of tenure. It would seem that the RBM may therefore not pass an objective test of independence and this also provides an even greater reason for the development of a new order of financial service regulation in Malawi.

---

69 (1971-1984) Famous Politician and now Leader of Opposition (one of the oldest serving Members of Parliament). John Tembo is now President of the Malawi Congress Party, the party that Dr. Kamuzu Banda led. But Kalilombe (2008) 20 cautions that care should be taken in interpreting these values because low turnover sometimes may mean lower independence of the Central Bank. A subservient governor may stay in the seat for a longer time if he does what the politicians want him to do. It is submitted this may have been the case in the John Tembo governorship.
72 Referendum was in 1993 and General Elections were held in 1994.
75 Kalilombe (2008) 41.
Malaŵi is however not unique in having a central bank as regulator and supervisor of the financial sector. The Netherlands, Antilles, Singapore and Uruguay are some of the countries with the peculiar regulatory system where the central bank and not a separate agency regulate securities firms, insurance companies as well as banks. The financial sector of Malaŵi is still at a rudimentary stage with low public confidence as reflected in the illiquidity of the MSE. The MSE has been in existence since 1994 but started equity trading in November 1996 when it had its first listing. Prior to that, the major activities undertaken were the provision of a facility for secondary market trading in Government of Malaŵi bonds namely, Treasury Bills and Local Registered Stocks. The Securities Act provides for the main regulatory framework for securities in Malaŵi. The MSE operates under the Securities Act. Malaŵi is also part of the Southern African Development Community (SADC) and Common Market for Eastern and Southern Africa (COMESA). Most of the members of SADC and COMESA have illiquid stock markets too.

1.3 Problem statement

In examining the legal aspects of unified financial services supervision in Malaŵi, focus will be on the independence and accountability of the unified regulator. The study seeks to find out whether or not the central bank of Malaŵi, as a unified regulator, has adequate autonomy and efficacy under the legal framework for financial services supervision to carry out efficiently the unified supervision of financial services. Closely related to this, the study examines the issue of whether the unified regulator in Malaŵi does enjoy in practice adequate autonomy, as

---

79 For example the MSE registered no trading in the week 6-10 September, 2010 (11 September was a holiday) see – Chiyembekeza C ‘Stock market closes 4-day trading week flat’ The Nation 13 September 2010 available at http://www.nationmw.net/index.php?option=com_content&view=article&id=5770:stock-market-closes-4-day-trading-week-flat&catid=11:business-news&Itemid=4 (accessed 17 September 2010).
81 Malawi Stock Exchange – Company Profile (2010).
83 Except the JSE in South Africa which is liquid by African standards.
84 Except for NSE in Kenya and EGX in Egypt.
provided for under the law, or whether it is constrained in its functions by interferences from other regulatory bodies or political institutions and persons.

1.4 Objectives

The overall objective of the proposed research is to propose a new regulatory and supervisory framework for the financial sector in Malawi.

The specific objectives of the research are to:

a) Critically analyse the structure of the current unified regulatory and supervisory system under the Reserve Bank of Malawi (Malawi’s central bank) by examining the legal, structural and institutional framework under which the current structure operates.

b) Critically analyse the concept of ‘an independent financial service regulator’ detached from the central bank as well as the notion of central bank independence.

c) Examine the efficacy of the legislative, regulatory and institutional framework for unified financial services supervision with a view to making policy recommendations for possible law reform.

1.5 Research hypothesis

The research is premised on the assumption that the current financial service regulation and supervision in Malawi is not independent, efficient and effective. The financial sector in Malawi has developed since 1964 when the RBM was established but the legislature has simply piled on the RBM with (more) regulatory and supervisory powers of all new entrants in the financial service sector. The assumption is that if financial service regulation were to be detached from the RBM and placed in an independent regulatory body, this would leave the RBM to monitor any crisis that may develop in the financial sector from ‘arms-length’ without it being directly a priori involved and thereby losing its high ground. The RBM would then concentrate on its role of ‘lender of last resort’. Further, freeing the RBM from the clutches of the executive would ensure separation (but not necessarily disconnect) between fiscal and monetary policy and ensure that the RBM concentrates on monetary policy.

87 But it started operating in 1965.
88 For example Malawi’s pursuit of a de facto fixed (pegged) exchange rate policy from 2006 to late 2009 made it difficult for the Reserve Bank of Malawi (RBM) to clear the foreign exchange market
1.6 Scope

It is admitted that the subject area under consideration is very extensive. Therefore, a limited but refined scope is proposed. The concept of central bank independence will mostly be dealt within the context of an effective framework that would be of beneficial interest to Malawi as a country. The thesis assumes that since Malawi already does have a unified regulator (the RBM), there will be no need to go into an elaborate discussion of different regulatory systems.

1.7 Significance of the research

As stated above, Malawi is a LLDC and with poverty being a key challenge although progress has been made resulting in increased household food security complimenting strong macroeconomic performance. The financial sector is still rudimentary and dominated by banking with capital markets which are not fully developed resulting in limited activity on the MSE. The Legislature has enacted new laws and amendments to the laws and some bills are pending enactment in a bid to improve financial sector regulation and supervision. However this notwithstanding, all regulatory and supervisory authority and power is still concentrated within the RBM.

Malawi would therefore benefit from an effective and independent financial regulatory system to attract investors, boost consumer confidence and explore other avenues such as cross-border listings which have the potential of leading to economic development and thereby reducing poverty. Such a system would also ensure that economic growth is sustained. Furthermore an independent central bank would free the RBM from the effects of politics associated with elections. This research would therefore be of use to the Government, the RBM, other financial institutions as well as to the academia. Even if the proposed framework were not to be adopted wholesome, it is hoped this research would prove a valuable addition and increase the wealth of knowledge on effective and efficient financial sector regulation in Malawi as well as independence of the central bank. It is also hoped that this research can provide a strong ground and basis for further research in this field.

at the official exchange rate, causing import demand backlogs and serious forex shortages. Foreign reserves became precariously low in 2009 falling to 0.6 months of imports – see African Economic Outlook : Malawi (2010).
1.8 Research methodology

There is a wealth of literature available on central bank independence and financial service regulation. Fortunately, literature from Malawi, Africa and with an African perspective is now available. In this work, a comparative analysis of the financial regulatory models in the UK and Zambia is done. The motivation for choosing these jurisdictions is that Malawi’s economy was once tied to the UK economy by virtue of colonialism and the influence of the UK’s financial system on Malawi still persists, albeit in a diminished manner. Furthermore Malawi is a common law jurisdiction and some English statutes are still law in Malawi. As for Zambia, it too as a former British colony inherited the common law. The two countries also share common languages and ethnic groupings as well as a connected history. They also have the same local name for their currency, the Kwacha. Economic and political conditions in Zambia are comparable to Malawi.

The research conducts a critical analysis of the situation within which the RBM operates as a financial service regulator as well as a central bank (both from the legal and practical point) and also critically engages with the literature in order to develop a robust framework for Malawi.

This work is mainly based on research work carried out at the libraries of the University of the Western Cape and University of Malawi and relevant information available on the internet. Apart from this, visits were made and books, documents and pieces of legislation collected, sourced or procured from the MSE, RBM, Malawi Stock Brokers Limited and Government Printer (Malawi). This research further benefitted from course material made available as part of the course of the International Finance Law module of the LLM programme.

89 Dr. Zolomphi Nkowani has written on the financial service in Malawi whilst Professor Kenneth Mwenda, amongst others, has written extensively on and about Africa and (developing) emerging markets and especially on Zambia: see the Bibliography.

90 The so-called received law. English judgements are constantly relied upon the Malawian Courts.

91 Federation of Rhodesia and Nyasaland. Malawi still has provisions that allow enforcement of judgements from Zambia (albeit referred to as Northern Rhodesia) although there is no reported case of any such provision being utilised.

92 Both are LDCs, both became multi-party states in the early.
1.9 Outline

Chapter One introduces the thesis, discusses the background of the study and the problem that the thesis aims to address. It outlines the research objectives and provides an outline and overview of how the thesis is to be presented.

Chapter Two conducts a literature review on independent financial regulation as well as central bank independence and emerging trends. A comparative study of countries in a similar position to Malawi (economically and politically) such as Zambia and how financial service regulation has evolved in that jurisdiction is also conducted. The UK’s Financial Services Agency (FSA) serves as the model comparative regulator.

Chapter Three critically discusses the existing regulatory framework of the financial sector in Malawi both from a legal, practical and political perspective and its developments since independence to the present. It analyses the various legal instruments and the political economy and their impact on financial service regulation.

Chapter Four contains the proposed framework for a new financial service regulatory system in Malawi. The framework is developed from emerging trends from a global and comparative basis as applicable to Malawi and in view of the current situation of financial service regulation in Malawi. The framework developed in this Chapter draws a lot of its strength from Chapters Two and Three.

Chapter Five contains the conclusions and recommendations arising out of the study including potential areas of future research.
CHAPTER TWO

2.1 Overview and rationale for regulation

Theory suggests that the primary role of financial institutions and capital markets is to facilitate the allocation of resources in an uncertain environment across space and time. Therefore regulation of the financial sector has a crucial role to play, especially in the development of third world countries, most of whom have enormous wealth disparities between sections of their populace. The term regulation refers to a set of binding rules issued by a private or public body. For the financial services sector, these can generally be defined as those rules that are applied by all regulators in the sector in the fulfilment of their functions. They include such prudential rules as those influencing the conditions of access to the market (intended to prevent the emergence of doubtful reputation entities with no implementation capacity for the intended operations) and those aimed at controlling the risk associated with financial activities, corporate governance and internal control systems, conduct-of business rules, and methods of supervision. Prudential regulations establish the outside limits and constraints placed on financial institutions to ensure the safety and soundness of the financial system.

Because of the role that banks play in the financial system, prudential rules for banks are a cornerstone of the regulatory framework. A crucial aspect of prudential regulation regards the enforcement powers given to bank supervisors to intervene to prevent losses from magnifying and to effect timely resolutions of bank failures. This entails a need to confer on bank supervisors the right to issue "cease and desist" orders, impose fines, appoint receivers, merge or liquidate banks, and generally play an active direct or indirect part in the management of ailing institutions.

---

Although most often the regulator is also the supervisor, the role of the regulator and that of the supervisor are somewhat different. A regulator is concerned mainly with preparing and issuing regulations and promoting a culture of compliance with these regulations while a supervisor may undertake on-site and off-site supervision of financial services business. In most jurisdictions however, the powers to regulate and to supervise the activities of the financial services sector reside in the same institution. The regulatory framework of financial services often comprises primary regulation, secondary legislation and guidance and (policy) directives and directions issued by the regulator.

Over the years financial regulation and supervision in many countries have been organized around specialist agencies with distinct responsibilities for banking, securities and insurance sectors, however, there has been a trend towards restructuring financial supervision in recent years, and in particular towards unified regulatory agencies—that is, agencies that supervise two or more of these areas. The institutional aspects of financial regulation and supervision are receiving great attention around the world. Even without a unified theory of financial service regulation, protecting investors (to help build confidence in the market), ensuring that markets are fair (efficient and transparent), reducing systemic risk (contagion), protection against malpractices (such as money laundering) and maintaining consumer confidence in the financial system comprise the broad objectives of regulation. A key objective of regulation is to redress information imbalances that sometimes exist between financial services businesses in favour of the consumer. Control of market abuses boosts consumer confidence in the financial services sector. Broadly put therefore, Governments regulate the financial sector for two main reasons, the first being consumer protection (similar to the way they regulate public utilities and telecommunications to provide a framework of rules that can help

101 As in the UK, or Malawi (Part II of the Financial Services Act says the Registrar is to Regulate and Supervise Financial Institutions) — see Mwenda KK (2006) 5.
103 Normally Ministerial regulations issued pursuant to the Act of parliament (enabling statute)
105 Mwenda 2003 at 1009-10, but see Mwenda KK (2006) 1 where he says a longer track record of experience with unified regulators is still needed before coming up with firm conclusions.
prevent excess and failures of a market left entirely to its own whims and devices) and the second is to maintain financial stability, a clear public good that justifies a more elaborate framework of regulation and supervision.\textsuperscript{110}

Regulators and supervisors in nations around the world are charged with managing the health of banks and other financial institutions and preserving the stability of the financial system.\textsuperscript{111} Financial service supervision, in particular, is more rigorous and intensive than supervision in other regulated sectors.\textsuperscript{112} Banking supervisors engage not only in off-site analysis of the bank’s performance but also in intensive on-site inspections, and they intensify their monitoring and may intervene when banks fail to meet minimum requirements designed to ensure their financial soundness.\textsuperscript{113} Supervisors can even, in extreme cases, take ownership rights away from the owners of failed or failing institutions.\textsuperscript{114} A clear example is what happened in Malawi recently. The regulator was called upon to supervise the operation of a troubled bank, Finance Bank of Malawi in 2005 leading to its closure.\textsuperscript{115} The regulator ended up running the bank\textsuperscript{116} and later liquidating its assets,\textsuperscript{117} a process yet to be concluded. It may be said, during all this time, part of the regulator’s time has been taken away from the supervision of other banks to concentrate on this troubled bank.

Banking regulation developed out of the concern of central banks to ensure financial stability.\textsuperscript{118} In many parts of the world, the central bank is responsible for regulating banks, while in others, it is a separate agency.\textsuperscript{119} In the non-banking financial sector, such as securities markets, insurance and pensions, regulation has usually been conducted either by a government ministry or by a specialist government agency.\textsuperscript{120}

\begin{flushright}

\end{flushright}
Before designing any framework, the size and structure of the industry and the role of the regulator need to be understood.\textsuperscript{121} It is also important to take into consideration the economic, political, legal\textsuperscript{122} and historic considerations when designing a regulatory framework.\textsuperscript{123} Recent research on the effectiveness of prudential regulation questions the unthinking transplantation of practices from rich countries into the very different political and institutional settings that prevail in most African countries.\textsuperscript{124} Detailed examination of cross-country evidence points to the limited effectiveness and, in many respects, the counter-productivity, in developing countries of some standard regulatory and supervisory practices.\textsuperscript{125} For example, the design of African stock markets, influenced by what was seen as best practice in advanced economies, may, through costs and prerequisites, have created barriers to listed equity finance for many African firms that could have obtained it if a more context-sensitive regulatory design had been chosen.\textsuperscript{126}

The regulatory framework is often comprised of a combination of two or more of the following: (a) primary legislation (b) secondary legislation (c) principles, rules etc issued by the regulator and (d) guidance or policy directives issued by the regulator.\textsuperscript{127} The regulatory framework is country-specific.\textsuperscript{128} But whatever the situation, to be effective and efficient, a regulator must be able to lay down rules or principles of conduct of financial services business, authorise their operation, lay rules of operation, supervise compliance, enforce rules, investigate breaches and cooperate and exchange information with other regulators.\textsuperscript{129}

Whatever regulatory system is employed, the legal framework should clarify the roles and responsibilities of different agencies involved in financial supervision.\textsuperscript{130}

\end{flushleft}
central bank laws, banking laws, and other laws governing financial sector supervision need to specify the relationships among the supervisory agency, any deposit insurance agency and other financial sector supervisors.\textsuperscript{132} In addition, the relationship with the ministry of finance needs to be clear and to provide sufficient operational autonomy to the supervisor.\textsuperscript{133} If a country has put in place a unified financial supervisory agency, then this arrangement needs to be laid down in a law, and its autonomy and powers need to be explicit.\textsuperscript{134} The legal and regulatory basis of financial supervision should also support the core components of all financial supervisory standards.\textsuperscript{135} Those components consist of the following categories:

- Regulatory governance; which refers to the objectives, independence, enforcement, and other attributes that provide the capacity to formulate and to implement sound regulatory policies and practices.
- Regulatory practices; which refer to the practical application of laws, rules, and procedures.
- Prudential framework; which refers to internal controls and governance arrangements to ensure prudent management and operations by financial firms.
- Financial integrity and safety net arrangements; which refer to (a) the regulatory policies and instruments designed to promote fairness and integrity in the operations of financial institutions and markets and (b) the creation of safeguards for depositors, investors, and policyholders, particularly during times of financial distress and crisis.\textsuperscript{136}

2.2 Models of financial services regulation and supervision

The four common models of financial services regulation are; regulation by objectives, functional regulation, institutional or regulation by silos and a single (also called a unified) regulator.\textsuperscript{137} The concept of single regulator is antithesis to institutional regulation but it is possible to have functional and institutional regulation in a joint matrix under a unified regulator.\textsuperscript{138}

\textsuperscript{132} Financial Sector Assessment (2005) 102.
\textsuperscript{133} Financial Sector Assessment (2005) 102.
\textsuperscript{134} Financial Sector Assessment (2005) 102.
\textsuperscript{135} Financial Sector Assessment (2005) 102.
\textsuperscript{136} Financial Sector Assessment (2005) 102.
\textsuperscript{137} Mwenda KK (2006) 8.
Where the aim is to have regulation by objectives, the model seeks to achieve certain explicit objectives by giving responsibility for one or more of them to specific regulatory bodies that exist solely for that purpose, such as a central authority empowered to conduct prudential regulation, a central authority responsible for supervising and passing regulations for the conduct of business, a central bank responsible for monetary policy and a central authority responsible for regulating competition.\textsuperscript{139} This regulation is of horizontal application, see fig 1 below:

\textbf{Fig 1.} The regulation/rules have horizontal application for example Prudential regulations apply to banks pensions, securities insurance etc.

For functional regulation, the general view is that it is more important to regulate functions performed by financial services business than the types of business that undertake them, such as client assets and all conduct-of-business issues.\textsuperscript{140} Functional regulation requires rules pertaining to function to be applied consistently to any business that discharges them, irrespective of the type of business.\textsuperscript{141} Therefore if an institution performs several financial functions, these functions will be regulated separately depending on their nature.

\textsuperscript{139} Mwenda KK (2006) 8-9.
\textsuperscript{140} Mwenda KK (2006) 9.
\textsuperscript{141} Mwenda KK (2006) 9.
Institutional regulation relates to the regulation of each single category of financial services by a different agency or division. Because of the vertical based manner in which this regulation model is structured, (vertical blocks like silos), institutional regulation is sometimes referred to as ‘regulation by silos’, see fig 2 below:

![Diagram of institutional regulation with blocks for banking, insurance, pensions, and securities]

Fig 2. The Different blocks/silos may be different authorities, agencies or divisions and divisions may be under a common authority at the top (such as the Reserve Bank of Malawi). However each block/silo will concentrate only on the financial services under it.

Looking at functional and institutional regulation, similarities abound as even in institutional regulation it may be argued that it is function based (for example is it a banking function?). However the major difference may be that the former emphasises the setting up of departments in a supervisory agency that deal with non-sectoral functions as licensing, legal, accounting, enforcement etc. irrespective of type of business activity regulated whilst the latter encourages organisation into departments that deal separately with all aspects of specific types of business activities.

A unified regulator may be structured differently depending on jurisdictions. It may be a single central authority to regulate different institutions and functions and monitor fulfilment of regulatory objectives or it may deal solely with the securities and insurance industries or solely with the pension funds and insurance companies.

---

2.3 Single, twin peaks and multiple financial regulators

In more developed financial markets such as Europe, three models are being practised; a three pillar model (banking, insurance and securities), a two pillar model (prudential versus conduct of business) and an integrated model (all types of supervision under one roof), the last being the unified regulator. However the choice of regulator whether, partially unified (normally where only two segments of the financial sector are supervised by a single regulator or a combination of the financial services) or fully unified (normally supervising all business activities in the financial sector) are contingent upon conditions obtaining in a country. As already stated, these may be economic, political, ideological and historical or a combination of these.

2.4 Independence of a financial services regulator

But why should a financial services regulator be independent anyway? History provides examples that demonstrate that in nearly every major financial crisis of the past decade, political interference helped make a bad situation worse. Quintyn and Taylor note that political pressures not only weakened financial regulation generally, they also hindered regulators and the supervisors who enforce the regulations from taking action against banks that ran into trouble. In so doing they crippled the financial sector in the run-up to the crisis, delayed recognition of the severity of the crisis, slowed needed intervention, and raised the cost of the crisis to taxpayers.

But even governments averse to an ownership role in banking may find it foisted on them in a crisis. However, the authorities' focus then must be on getting out as quickly as possible, using the market, rather than government agencies, to identify

---

152 Quintyn M & Taylor MW (2004).
winners and losers.\textsuperscript{154} Drawing on public funds to recapitalize some banks may be unavoidable in truly systemic crises, but they must be used sparingly to leverage private funds and incentives.\textsuperscript{155} Policymakers seem to have realised their limitations as in recent financial crises, policymakers in the countries affected sought to intervene in the work of regulators often with disastrous results.\textsuperscript{156} It is now increasingly recognised that political meddling has consistently caused or worsened financial instability.\textsuperscript{157} For example, in \textit{Collapse}, former central bank president Ruth de Kivroy cited ineffective weak regulation and political interference as the cause of the Venezuelan crisis of 1994.\textsuperscript{158} In East Asia, political interference in the regulatory and supervisory process postponed recognition of the severity of the crisis and ultimately the delayed action deepened the 1997/98 crisis.\textsuperscript{159} In Korea, for example, whilst the commercial banks were regulated by the central bank, specialised banks and other financial institutions were regulated by the finance ministry and the ministry’s weak supervision encouraged excessive risk taking which helped lead to the 1997 crisis.\textsuperscript{160} In Indonesia there was a mixture of poorly enforced regulations and supervisors’ reluctance to take action against politically well connected banks, especially those linked with the Suharto family and when the crisis hit, central bank procedures for dispensing liquidity support for troubled banks were overridden on the alleged direct instructions of the president.\textsuperscript{161} Lack of independence of financial supervisors in Japan’s finance ministry weakened the country’s financial sector and contributed to prolonged banking sector problems. Following a decline in the ministry’s reputation in the late 1990s, the Japanese government created a new financial services agency to oversee banking, insurance and the securities markets, in part as an attempt to improve the independence of supervision.\textsuperscript{162}

\textsuperscript{154} Finances for growth (2001) 2.
\textsuperscript{155} Finances for growth (2001) 2.
\textsuperscript{156} Quintyn M & Taylor MW (2004).
\textsuperscript{157} Quintyn M & Taylor MW (2004).
\textsuperscript{159} Quintyn M & Taylor MW (2004).
\textsuperscript{160} Quintyn M & Taylor MW (2004).
\textsuperscript{161} Quintyn M & Taylor MW (2004).
\textsuperscript{162} Quintyn M & Taylor MW (2004).
There seems to increasingly be a shift even by policymakers\textsuperscript{163} and policy analysts to shield financial sector regulators from political pressure to improve the quality of regulation and supervision with the ultimate goal of preventing financial crises.\textsuperscript{164} Goodhart and Schoenmaker also observe a trend towards separation between monetary policy and supervisory agencies,\textsuperscript{165} in other words, leaving the central bank to concentrate on monetary policy and leaving regulation and supervision of the financial sector to supervisory agencies. Achieving an efficient and secure financial market environment requires an infrastructure of legal rules and practice and timely and accurate information, supported by regulatory and supervisory arrangements that help ensure constructive incentives for financial market participants.\textsuperscript{166}

In passing laws that create regulatory agencies, politicians properly set and define regulatory and supervisory goals but once those laws are in force, regulators must be free to determine how to achieve those goals, and should be held accountable if they fail to achieve them.\textsuperscript{167} Independence must be looked from four related angles: regulatory, supervisory, institutional and budgetary.\textsuperscript{168}

\textit{Regulatory independence} implies that the regulator has wide autonomy in setting at a minimum, prudential rules and regulations that follow from the special nature of financial intermediation.\textsuperscript{169} These rules and regulations concern the practices that financial institutions must adopt to maintain their safety and stability, including minimum capital adequacy ratios, exposure limits and loan provisioning.\textsuperscript{170} Regulators who are able to set these rules independently are more likely to enforce them.\textsuperscript{171} They are also able to adapt the rules quickly and flexibly in response to changing conditions in the marketplace without having to go through a lengthy, high-pressure political process.\textsuperscript{172} Regardless of the detail\textsuperscript{173} in a country’s legislation,

\begin{flushleft}

\textsuperscript{172} Quintyn M & Taylor MW (2004).
\end{flushleft}
independent regulators should be given ample discretion to set and change regulations within the broad confines of the country’s and laws.\textsuperscript{174}

\textit{Supervisory independence} denotes that the supervisory agency has independence to supervise the financial sector\textsuperscript{175} without undue influences.\textsuperscript{176} Whilst supervisory independence is crucial in the financial sector it is also difficult to establish and guarantee because supervisors work quite closely with financial institutions, not only in inspecting and monitoring them but also enforcing sanctions and revoking licences.\textsuperscript{177} Much of their activity takes place outside public view, and interference with their work, either by politicians or by the industry can be subtle, and can take many forms.\textsuperscript{178} Steps to protect supervisor integrity include indemnifying supervisors from being personally sued for their work and providing financial incentives that allow supervisory agencies to attract and keep competent staff and discourage bribery.\textsuperscript{179} Independent regulators, not a government agency or minister should be given the sole authority to grant and withdraw licenses not only because they best understand the financial sector’s proper composition but also because the threat to revoke a license is a powerful supervisory tool in itself.\textsuperscript{180}

\textit{Institutional independence} has to do with the agency’s status outside the executive and legislative branches of government.\textsuperscript{181} It has three critical elements, first senior personnel should enjoy security of tenure; clear rules ideally involving two government bodies must govern their appointment and, especially dismissal.\textsuperscript{182} Secondly the regulator’s governance structure should consist of multi-member commissions composed of experts and thirdly decision making should be open and transparent to the extent consistent with commercial confidentiality, enabling both the public and the industry to scrutinise regulatory decisions.\textsuperscript{183}

\begin{flushright}
\textsuperscript{173} In some countries the law is so detailed as to leave a little room for independent rule setting in others the laws merely brush on the framework, leaving much greater scope for regulatory discretion – in Malawi it would appear to be a hybrid with detail in the law but enough discretion for the regulator to set up rules, regulations and directives. \\
\textsuperscript{174} Quintyn M & Taylor MW (2004). \\
\textsuperscript{175} Including the power to be the sole authority to grant and withdraw licenses - a powerful supervisory tool in itself. \\

\textsuperscript{182} Quintyn M & Taylor MW (2004). \\
\textsuperscript{183} Quintyn M & Taylor MW (2004).
\end{flushright}
Budgetary independence relates to the regulator not being subjected to political pressure through its budgetary needs.\textsuperscript{184} Should funding come from the state, then it should be proposed and justified by the regulator following an objective market based criteria.\textsuperscript{185} Some regulators are funded through industry fees, a practice that minimises political interference but risks dependence on – and attracting interference from – the industry.\textsuperscript{186} And sometimes a fee based funding structure may leave the regulator strapped for funds during a crisis because that is precisely when the industry is most likely to have difficulty paying the fee.\textsuperscript{187} Regulators should therefore be allowed to build up reserve funds as insurance.\textsuperscript{188} Senior personnel should have the budgetary freedom to recruit staff as they see fit and to respond quickly to emerging needs.\textsuperscript{189}

It would however, be naïve to think that making financial regulatory and supervisory agencies independent solves or will solve all financial problems as well as future financial crises. This is partly because financial crises, though regrettable more frequent in recent decades, remain rare events and are often triggered by factors independent of the organisational structure of supervision.\textsuperscript{190} The literature on financial crises has not explored the relationship between institutional structure and the likelihood of severe financial sector problems or a full-blown financial crisis.\textsuperscript{191} Although an independent regulator may not avoid a financial crisis from occurring,\textsuperscript{192} what is clear, is that an independent financial services regulator has more chance of managing a crises than one who is not independent because for countries in financial crises where financial services regulators lacked independence, that tended to worsen the crisis.\textsuperscript{193}

\textsuperscript{193} Mwenda KK (2006) 30.
It needs to be appreciated that finance is inherently fragile, largely because of the inter-temporal leap in the dark that many financial transactions involve.\textsuperscript{194} Finance cannot be effective without credit, but credit means leverage, and leverage means the risk of failure, sometimes triggering a chain reaction (contagion).\textsuperscript{195}

If finance is fragile, banking is its most fragile part.\textsuperscript{196} Bankers have to place a reliable value on the assets they acquire (including the creditworthiness of borrowers).\textsuperscript{197} Banking also adds the complications not only of maturity transformation, but of demandable debt, that is, offering debt finance backed by par value liabilities in the form of bank deposits.\textsuperscript{198} Polizatto says banks hold a unique position in most economies as creators of money, the principal depositories of the public's financial savings, the primary allocators of credit, and managers of the country's payment systems.\textsuperscript{199} For this reason, he argues, governments establish public policy for banks in the public interest and in most market economies, the goals of these policies are to control the supply of money, prevent systemic financial instability, and ameliorate concerns about the efficiency and equity of financial intermediation.\textsuperscript{200} The failure of any bank, no matter how small, may lead to contagion and loss of confidence in the system, unless the government can demonstrate its ability to handle bank failures in an orderly and systematic fashion.\textsuperscript{201}

The particular fragility of finance, and within it of banking, is true for all countries regardless of their income level, as attested to by the occurrence of banking crises in many industrial economies in the 1980s and 1990s\textsuperscript{202} as well as the recent global crisis. Developing countries face several additional sources of fragility.\textsuperscript{203} Not only are information problems in general more pronounced, but developing economies are also smaller and more concentrated in certain economic sectors or reliant on particular export products, and accordingly are less able to absorb shocks or pool isolated risks.\textsuperscript{204}

2.5 Central bank independence

Since the 1980s, more countries have freed their central banks from political control because evidence was growing that independent central banks had a successful record of achieving monetary stability – in other words, controlling inflation.\textsuperscript{205} As already seen, Goodhart and Schoenmaker cite the trend towards separation between monetary policy and supervisory agencies,\textsuperscript{206} so that central banks, apart from being independent as argued by Quintyn and Taylor, are also separated from financial supervisory and regulatory functions.\textsuperscript{207} Central bank independence is seen as essential to counter the natural preference of politicians for expansionary economic policies that promise short-term electoral gains at the risk of worsening inflation in the long run.\textsuperscript{208} Making central banks independent frees them from political pressure and thus removes the inflationary bias that could otherwise unsettle monetary policy.\textsuperscript{209} In most countries, such as Malawi, the finance minister will set out his fiscal policy in parliament with inflation targets. Most often than not, these are based on the need to win the vote of confidence of the taxpayer so that the economy is seen to be on the rise. If the central bank is not independent in such a scenario, the central bank will be forced to start adjusting the monetary policy to suit the tailor-made fiscal policy geared towards achieving cosmetic inflationary targets.

Incentives for politicians to rescue failing banks are similar to those for inaction in the face of inflation.\textsuperscript{210} The decision to close a failing bank is usually unpopular and politicians eager to avoid a necessary closure may be tempted to pressure bank supervisors to organise a bailout or to excuse the failing bank from regulatory requirements, at the risk of worsening the problem and increasing long-term costs of resolving it.\textsuperscript{211} The same may also apply where politicians have connections with the failing bank, and here the reasons may not be as much not to make an unpopular decision as in not to make a decision that may not be in their own interests.\textsuperscript{212} This strengthens the case for regulatory and supervisory independence in the financial

\end{itemize}
sector. Bank regulatory independence is to financial stability what central bank independence is to monetary stability, and the independence of the two agencies can be mutually enforcing and both agencies also provide a public good – financial stability - which sets them apart from other sector-specific regulatory agencies.

2.6 Independent but accountable

The issue of loss of state power may be of concern in granting independence to finance service regulators. Banking supervisory authority differs from central bank authority in one important way; when banking supervisors revoke a failing bank’s licence, or run the bank as statutory manager, they are using the coercive power of the state (usually embodied in some form of legislation) against private citizens whilst when a central bank conducts monetary policy, they have no such coercive power and the uniqueness of this power by the regulator may be the basis of an argument against granting them independence. It would be naive to underplay these fears against creating an independent authority with state powers but instead it is suggested that governments should fully accept and take the implications of that power into account both by establishing strong accountability mechanisms to prevent abuse and recognising the need to employ highly qualified supervisors of demonstrable integrity and to pay them adequately.

In theory, independent regulators can decide on and conduct market interventions shielded from political interference and improve regulatory and supervisory transparency, stability and expertise. Growing evidence suggests that independent regulators have made regulation more effective, have led to smoother and more efficient operation of the market and are a distinct improvement over regulatory functions located in government ministries.

---

215 See for example statutory manager appointed under s 68 of the Financial Services Act
216 For example the Financial Services Act or any of the Financial Services Laws.
A regulator needs legal protection from liability arising out of the proper discharge of
its powers to ensure diligence, competence and independence.\textsuperscript{221} Having clear
responsibilities, objectives, adequate powers, adequate resources (human capital,
is\textsuperscript{222} infrastructure and technology to process information in a timely manner),
transparency and accountability will make a regulator effective\textsuperscript{223} and reduce fears of
it becoming a fourth arm of the state.\textsuperscript{224} The fear here is they are outside the control
of the traditional three arms or branches that keep democratic systems in equilibrium
through a system of checks and balances.\textsuperscript{225}

On the other hand, as Nobel Prize winning economist George J. Stigler pointed out,
agencies tend to respond to the wishes of the best organised interest groups and
when regulators are free from political control, the risk of “regulatory” capture by
other groups, - in particular the industry they regulate – grows,\textsuperscript{226} a view shared by
Mwenda.\textsuperscript{227} Agencies that suffer from such capture come to identify industry interests
(or even interests of individual firms) with the public interest and industry capture can
undermine the effectiveness of regulation just as political pressure can.\textsuperscript{228} The
general view is that a regulator must be operationally independent and accountable
for the use of its powers whilst providing the right of appeal of its decisions and
access to judicial review.\textsuperscript{229} The need for accountability will stop an independent
regulator pursuing an agenda of its own and although fears of an independent
regulator going on an agenda course of its own or becoming an uncontrollable fourth
branch of the government appear exaggerated, they nevertheless demonstrate the
need for proper forms of accountability to balance the advantages of regulatory
independence with the disadvantages.\textsuperscript{230}

Therefore achieving both political independence and independence from the
regulated industry, as well as accountability is essential and of these political
independence remains the prime concern from the point of view of financial stability,
given the vested interests that many national governments still have in the banking system, and therefore, in bank regulation and supervision, as well as the dismal track record of political interference in regulatory and supervisory arrangements.\footnote{Quintyn M & Taylor MW (2004).}

2.7 Regulatory models and systems in comparable countries

*United Kingdom*

Malawi’s economy was once tied to the UK economy by virtue of colonialism. The influence of the UK’s financial system can therefore not be overemphasised.\footnote{See the introduction in Chapter One (Historical context and state of affairs)} The Financial Services Authority (FSA) in the UK is the unified regulator. It combines prudential, conduct of business and market conduct regulation across the full range of financial services, including banking, securities, investment management and insurance.\footnote{Briault C ‘The Rationale for a Single National Regulator’ (1999) *FSA Occasional Paper* (hereafter Briault C (1999)) 5.} But the FSA whilst being the more famous was not the first unified regulator with earlier integrated financial regulation being done in Scandinavia a decade before the FSA came into being.\footnote{Taylor MW & Fleming ‘A Integrated Financial Supervision: Lessons of Scandinavian Experience’ (1999) *IMF Finance and Development* Vol 36 No 4.} The FSA was the result of the merging of financial services regulation announced by the chancellor of the exchequer in May 1997.\footnote{Briault C (1999) 6. The chancellor then was Gordon Brown of the Labour Government who went on to become the Prime Minister till defeat by the Conservatives in 2010. This may have provided (until the defeat) the requisite political goodwill for the FSA.} The FSA merged the Securities and Investment Board and also took over the supervisory responsibilities of the Bank of England.\footnote{Briault C (1999) 7.} The rationale for this merging was that the then existing arrangements of financial regulation involved a large number of regulators, each responsible for different parts of the industry and a glowing blurring of the distinctions between different kinds of financial services (banks, building societies, investment firms, insurance companies etc) made financial services regulation complex, inefficient, confusing\footnote{To both the regulated firms and their customers.} and costly.\footnote{Briault C (1999) 6.} However the coming in of the FSA did not mean it was the only body overseeing the financial services. The FSA works with the Bank of England and treasury and the responsibilities were thus divided:

\footnotesize{\begin{itemize}
\item Quintyn M & Taylor MW (2004).
\item See the introduction in Chapter One (Historical context and state of affairs)
\item Briault C (1999) 6. The chancellor then was Gordon Brown of the Labour Government who went on to become the Prime Minister till defeat by the Conservatives in 2010. This may have provided (until the defeat) the requisite political goodwill for the FSA.
\item Briault C (1999) 7.
\item To both the regulated firms and their customers.
\item Briault C (1999) 6.
\end{itemize}}
• Treasury responsible for overall institutional structure of regulation and the governing legislation.

• Bank of England responsible for:
  - overall stability of the financial system including the stability of the monetary system;
  - financial infrastructure (in particular payment systems) as well as for being able in "exceptional" circumstances subject to the agreement of the Treasury to undertake official financial support operations;
  - efficiency and effectiveness of the financial sector.

• FSA responsible for:
  - authorisation and supervision of financial services firms;
  - supervision of financial markets and of clearing and settlement systems;
  - conduct of market-based support operations not involving official finance in response to problems affecting firms, markets and clearing and settlement systems;
  - regulatory policy in all of these areas.

However, during the 2007-2009 global financial crisis, the Bank of England and Treasury came to the rescue of failing financial institutions (mainly banks) prompting the biggest shake up since the formation of the FSA. The new Chancellor announced sweeping changes which may see the abolition of the existing tripartite regime between the FSA, Bank of England and Treasury. If they come to fruition, these changes may not mean the scrapping the FSA but will have the effect of at least stripping it bare with prudential regulation moving to a new body reporting to the Bank of England, and a new agency being created to tackle serious economic crime. The new prudential regulator (the Prudential Regulatory Authority) will operate as a subsidiary of the Bank of England and will carry out prudential regulation of financial firms, including banks, investment banks, building societies and insurers. The New Consumer Protection and Markets Authority will regulate

---

241 The FSA is dead (2010).
242 The FSA is dead (2010).
243 The FSA is dead (2010).
the conduct of every authorised financial firm providing services to consumers.\textsuperscript{244}

Whether this includes firms other than those currently authorised by the FSA (for example credit providers and intermediaries) remains to be seen,\textsuperscript{245} but clearly the FSA’s prowess will have been reduced. In going this route, the UK will create a ‘twin peaks’ system separating prudential and conduct regulation but this bucks the trend of moves within the EU in the recent past to consolidate and unify financial regulation.\textsuperscript{246} Clearly the decision to change the regulatory framework maybe political but it may also have been self-made because of regulatory failure. Mwenda has described the failure of financial regulation as one of the most important causes of this global economic crisis.\textsuperscript{247} However, he argues that in order to avoid experiencing such a crisis again, the solution lies in designing and implementing more effective regulatory frameworks for financial institutions.\textsuperscript{248} It would therefore seem that the solution lies not in removing regulatory bodies, or dismantling them as proposed in the UK but making them more stringent and effective.

Despite the announcement of these plans, the FSA is still intact \textsuperscript{249} and as late as March 2011 issued a publication on updated guidelines across its constituency.\textsuperscript{250} Pronouncements that the FSA is dead may therefore prove to have been immature. For now, the FSA remains the single financial service regulator of the UK.

\section*{Zambia}

Malaŵi and Zambia share many roots. Courtesy of being former British colonies, they all inherited the English Common law and principles of equity.\textsuperscript{251} The two countries share common languages and ethnic groupings (Chewas, Ngonis, Tumbukas and Tongas).\textsuperscript{252} Both were under the Federation of Rhodesia and Nyasaland.\textsuperscript{253} Whilst

the Zambian economy took an industrial route courtesy of discovery of copper, the Malawi economy has largely remained agro-based, although the recent discovery of uranium may change that. The opening of the Kayekera Uranium mine operated by Paladin Africa and prospects of more mines are likely to change the economic landscape of Malawi. At the moment, the Zambian economy would therefore be like the ‘bigger brother’. In both countries lack of liquidity is a serious impediment to the efficient functioning of their stock markets. Malawi and Zambia even share the same local name for their currency, the Kwacha. These legal, political, historical and economic similarities make Zambia the ideal comparative country.

In Zambia, the Banking and Financial Services Act 1994 (BFSA) is the legislative cornerstone for the regulation and supervision of banks and financial institutions. Closely related to the BFSA is the Bank of Zambia Act 1996. Mwenda says that although the Bank of Zambia (BOZ) provides for a mechanism of independence, BOZ is not independent and to a large extent operates under the executive arm of the state. The bank itself admits that lack of operational autonomy is the major challenge it faces as a central bank. The governor of BOZ has argued that the tenure of office of the bank governor should not run concurrently with the term of office of a particular government to enhance professionalism and remove patronage. A similar problem of the central bank governor’s tenure has been raised by Kalilombe in the case of Malawi. The World Bank says a solution which also can help ensure the quality of regulatory oversight, is fixed and long terms for

---

255 With problems in Zimbabwe, that country may take time to regain its lead as the economic powerhouse of the former ‘federation countries’.

257 Literally means it is light (after the darkness of the night) but symbolises the dawn of a new political era and freedom when the two countries obtained their Independence from Britain.

259 Mwenda KK (2010) 68.

the central bank governor, ending the ability of the executive to remove them without a solid majority of parliament.  

In Zambia, the registrar of banks and financial institutions authorises companies to conduct banking and financial services. The registrar is based at the central bank and BOZ for all intents and purposes is the competent authority regulating and supervising banks and financial institutions. Zambia has a twin peak unified system of financial services supervision. On the one hand BOZ has separate departments to supervise banks and non banking financial institutions, on the other, the Pensions and Insurance Authority (PIA) is responsible for supervising insurance companies and pension funds, even though both are in essence nonbanking financial institutions not much different from those supervised by BOZ. Mwenda says this ‘anomaly’ may be because either under section 2 of the BFSA, pension funds and insurance companies are not recognised as financial institutions that carry on “financial services business other than banking business” or the relevant department in BOZ is concerned only with the regulation and supervision of nonbanking financial institutions that accepts deposits taking or provide loans.

**Conclusion**

This chapter has discussed the theoretical underpinnings of financial services regulation, its rationale as well as models of financial services regulation and supervision.

The chapter examined the requirements that independence must be looked from four related angles: regulatory, supervisory, institutional and budgetary. In examining these ‘yardsticks’ for independence, the chapter also examined the requirements for a regulator to be truly independent. To attain regulatory independence, the regulator must have wide autonomy in setting prudential regulations that follow from the special nature of financial intermediation. Supervisory independence requires independence to supervise the financial sector without undue influences. It was

---

noted that supervisory independence is difficult to establish and guarantee because supervisors work quite closely with financial institutions. Institutional independence has to do with the agency’s status outside the executive and legislative branches of government and involves three critical elements; security of tenure of senior personnel; having a governance structure of multi-member commissions composed of experts and transparency in decision making but consistent with commercial confidentiality.

The Chapter also looked at the benefits of having an independent financial services regulator as well as the need to be accountable so as to allay fears of the regulator being branded a fourth estate. Because of the central role that banks play in the financial sector, the chapter also looked at central banks and how making them independent from (excessive) political manipulation can improve their performance. In this regard the security of tenure of the governor of the central bank is a key factor.

The Chapter ends with a comparative study of the financial service regulatory and supervisory systems in the UK and Zambia. The UK has a unified single regulator whilst Zambia has a twin peak system. As will be seen in the next chapter, Malawi has a unified (single peak) regulatory system but there are strong comparisons to the legal and operation framework of Malawi and Zambia. The next chapter critically analyses the current financial services regulatory framework of Malawi.
CHAPTER THREE

3. The Financial Service Regulatory System in Malaŵi

3.1. Overview of the contextual framework

Malaŵi gained independence from Great Britain in 1964 and became a Republic in 1966. Before becoming a Republic, Malaŵi used the Union Jack, the British Pound Sterling and sang ‘God Save the Queen!’ On attaining Republican status, Malaŵi politically delinked its economy from Britain and set up its own financial system, with the Malaŵi Kwacha as the new currency. The Kwacha was however still fixed to the British Pound Sterling up to 1973 when world-wide economic difficulties precipitated by the oil price shocks of the 1973/1974 and general problems associated with the fixed exchange rate regimes led to its abandonment and a search for other fiscal solutions for the stabilisation of its currency.

However, almost 47 years after political independence and 45 years after financial independence, Malaŵi remains one of the Least Developing Countries (LDC) and its situation is exacerbated by the fact that it is also landlocked. Malaŵi is therefore a Land-Locked Least Developing Country (LLDC) and amongst the poorest in the world. Poverty is a fact and remains a key challenge. Real per capita GDP stood at 189 USD in 2009. Progress has however, been made in tackling poverty and other social challenges. Increased household food security and falling poverty have complimented strong macroeconomic performance. The government estimates that the poverty headcount has fallen from 52.4% in 2005 to 40% in 2010.

---

271 The flag for Great Britain.
Overall well-being remains low, but is improving, as measured by the UN Human Development Index score of 0.493 that ranks Malawi at 160 out of 182 countries in 2009, up from 164 out of 177 in 2007/08. Macroeconomic indicators have put Real GDP Growth for 2008, 2009, 2010 and 2011 at 9.8, 7.0, 6.0 and 6.2.

Malawi is a constitutional supremacy, a situation that came about after the 1993 referendum that ushered in multiparty democracy and a new democratic Constitution. The system of government is that of an executive presidency. Although constitutionally there are three arms of Government (executive, legislature and judiciary) the State President is head of the three arms apart from being head of Government. At the conferences that led to the new Constitution in 1992-3, the issue of limiting the president’s powers was topical, especially coming from days of one party dictatorship under Kamuzu Banda. In the end Malawi ended up with a Constitution that can best be described as a hybrid of the American (presidential) system and the British (parliamentary) system but more inclined to the presidential system. In Malawi, the president is therefore a very powerful legal personality and his decisions and exercise of discretion has a profound effect on all facets of the country.

The financial sector in Malawi is not very well developed and is reflective of its rather small economy and size. The banking sector dominates the financial sector.
Eleven commercial banks\textsuperscript{290} offer a variety of services and generally allocate credit on market terms.\textsuperscript{291} However, high credit costs and scarce access to financing hinder more vibrant business activity.\textsuperscript{292} The economic fundamentals do not lend themselves attractive to the development of a saving culture. For example, although the 12-month inflation rate for January 2011 is officially\textsuperscript{293} at 6\%, bank rate is at 13\%, savings rate ranges from 0.75 to 2.5\% whilst the lending rate ranges from 17.75 to 23.75\%.\textsuperscript{294} There is therefore the situation that the savings rate is not attracting enough savings which can be used to lend out.

The alternative for those who may wish to invest seems to be the securities market. However, the securities markets are not fully developed and activity on the Malawi Stock Exchange (MSE), the only stock exchange remains very limited.\textsuperscript{295} The MSE has one tier trading arrangement under the Malawi All Share Index (MASI) although it recently introduced the Alternate Capital Market (ACM).\textsuperscript{296} The ACM is yet to see any listing. The ACM is supposed to cover small business which could not meet the regulatory rigours of those listed under the MASI.\textsuperscript{297} The reasons for this lack of enthusiasm may need to be researched further.

The financial sector of Malawi is still at a rudimentary stage with low public confidence as reflected in the illiquidity of the MSE.\textsuperscript{298} The turnover velocity, an indicator of the liquidity of assets traded on the market was 1.33 \% in 2009 compared to 3.33 \% recorded in 2008\textsuperscript{299} (refer to Appendix A for a table of trading in 2009). The

\begin{footnotesize}
\begin{enumerate}
\item See Appendix C.
\item Index of Economic Freedom (2010).
\item Index of Economic Freedom (2010).
\item There is always ongoing debate as to whether the official figures reflect the situation on the ground. However the 6.60 is an average comprising of two components: Non-Food 10.70\% and Food 2.90\% - ‘Reserve Bank of Malawi’ available at \url{http://www.rbm.mw/} (accessed 23 March 2011).
\item ‘Reserve Bank of Malawi’ available at \url{http://www.rbm.mw/} (accessed 23 March 2011).
\item Index of Economic Freedom (2010).
\item It is submitted that the MSE may have to reconsider changing the name from ACM to Alternative Securities Market in line with the Securities Act which replaced the Capital Market Development Act as well as in line with financial trends.
\item For example the MSE registered no trading in the week 6-10 September, 2010 (11 September was a holiday) see – Chiyembekeza C ‘Stock market closes 4-day trading week flat’ \textit{The Nation} 13 September 2010 available at \url{http://www.nationmw.net/index.php?option=com_content&view=article&id=5770:stock-market-closes-4-day-trading-week-flat&catid=11:business-news&Itemid=4} (accessed 17 September 2010).
\item A practical example of illiquidity of the MSE was when the author failed to sell shares in two listed companies for more than 6 months!
\end{enumerate}
\end{footnotesize}
MSE has been in existence since 1994 but started equity trading in November 1996 when it first listed National Insurance Company Limited (NICO).\footnote{300} Prior to the first listing, the major activities undertaken were provision of a facility for secondary market trading in Government of Malawi bonds namely, Treasury Bills and Local Registered Stocks.\footnote{301}

The MSE was licensed under the Capital Market Development Act 1990\footnote{302} (CDMA) and Companies Act 1984.\footnote{303} The Securities Act 2010 has replaced the CDMA. The Securities Act provides for the main legislative framework for securities regulation in Malawi. The MSE now operates under the Securities Act. Malawi is also part of the Southern African Development Community (SADC)\footnote{304} and Common Market for Eastern and Southern Africa (COMESA).\footnote{305} Its membership of both organisations has raised debate but such a discussion is outside the scope of this work. Most of the members of SADC\footnote{306} and COMESA\footnote{307} have illiquid stock markets too.\footnote{308}

### 3.2. Financial sector regulation and supervision

\footnote{300} ‘Malawi Stock Exchange : Company Profile’ available at \url{http://www.mse.co.mw/prof.html} (accessed 18 September 2010). (hereafter Malawi Stock Exchange – Company Profile (2010)).
\footnote{301} Malawi Stock Exchange : Company Profile (2010).
\footnote{302} Chap 46:06 of the Laws of Malawi. Hereafter Capital Markets Development Act or CMDA.
\footnote{304} See Southern Africa Development Community available at \url{http://www.sadc.int/} (accessed 17 September 2010).
\footnote{305} See The Common Market for Eastern and Southern Africa available at \url{http://www.comesa.int/} (accessed 17 September 2010).
\footnote{306} Except for the JSE in South Africa which is liquid by African standards.
\footnote{307} Except for NSE in Kenya and EGX in Egypt.
\footnote{309} See 2 , Financial Services Act 2010 (hereafter Financial Services Act ). The pensions Bill has not been enacted and the Financial Cooperatives Act has just been enacted in 2011.
The definitions includes some bills\textsuperscript{310} as if they are acts and it is submitted that this was in anticipation of their passing. The Exchange Control Act is not included and it is the author’s view that this omission was by error and not design.\textsuperscript{311}

3.2.1. The Constitution

Although the Constitution is not included amongst the FSL, it plays a crucial role in the overall scheme of things. First, it is the supreme law of the land\textsuperscript{312} and any law or act of government inconsistent with it is invalid to the extent of the inconsistency.\textsuperscript{313}

The Constitution also provides for judicial review by the High Court for any law or administrative action or decision of the government.\textsuperscript{314} Government has always been construed broadly and includes any organ exercising public authority.\textsuperscript{315} The Constitution also provides for the right to administrative justice\textsuperscript{316} which provides for the right to lawful and procedurally fair administrative action, which is justifiable in relation to reasons given where those rights, freedoms, legitimate expectations or interests are affected or threatened.\textsuperscript{317} It also provides for the right to be furnished with reasons in writing for such administrative action.\textsuperscript{318} Under the maxim \textit{ubi jus ibi remedium},\textsuperscript{319} the courts are enjoined to provide a remedy where any fundamental rights enshrined in the Constitution has been violated\textsuperscript{320} and the court has the power to award compensation where it considers it to be appropriate in the circumstances of a particular case.\textsuperscript{321}

This provides everyone (natural and juristic persons) with the right to challenge administrative action and this right avails to a financial institution which may have its rights, freedoms, legitimate expectations and interests affected by any regulatory decision.

\textsuperscript{310}At least at the time the Act was passed.
\textsuperscript{311}This is because financial \textit{Bureaux de Change} are regulated by the Exchange Control Act and are for purposes of the Act financial institutions.
\textsuperscript{312}Sections 4, 199 the Constitution of the Republic of Malawi, 1994 (hereafter Constitution).
\textsuperscript{313}Section 5 Constitution.
\textsuperscript{314}Section 108(2) Constitution.
\textsuperscript{315}See \textit{The State v The Chief Secretary to the President; Ex Parte Dr Bakili Muluzi}, Misc. Civil Application No 3 of 2011 (HC) Mzuzu Registry (unreported).
\textsuperscript{316}Section 43 Constitution.
\textsuperscript{317}Section 43(a).
\textsuperscript{318}Section 43(b).
\textsuperscript{319}For every right, there is a remedy; where there is no remedy, there is no right.
\textsuperscript{320}Section 46(2)(b).
\textsuperscript{321}Section 46(4).
The Constitution also has a whole chapter dedicated to the RBM albeit containing only two sections. But what is more revealing is not the contents of the chapter but the fact that the drafters decided to give recognition to the RBM in a separate chapter. Chapter XIXI states:

s. 185. 1. There shall be established by an Act of Parliament a central bank of the Republic, known as the Reserve Bank of Malawi which shall serve as the State's principal instrument for the control of money supply, currency and the institutions of finance and shall serve generally in accordance with the normal functions of a central bank.

2. The Bank shall be controlled by a Board which shall consist of a chairman and members of the Board who shall, subject to this Constitution, be appointed in accordance with the Act of Parliament by which the Bank is established.

3.2.2. Central Bank

- Legal structure:

Section 3 of the Reserve Bank of Malawi Act (RBMA) states that the principal objectives of the RBM shall be:

- (a) to issue legal tender currency in Malawi;
- (b) to act as banker and adviser to the Government;
- (c) to maintain external reserves so as to safeguard the international value of the Malawi currency;
- (d) to implement measures designed to influence the money supply and the availability of credit, interest rates and exchange rates with the view to promoting economic growth, employment, stability in prices and a sustainable balance of payments position;
- (e) to promote a sound financial structure in Malawi, including payment systems, clearing systems and adequate financial services;
- (f) to promote a money and capital market in Malawi;
- (g) to act as lender of last resort to the banking system;
- (h) to supervise banks and other financial institutions;
- (i) to collect economic data of the financial and other sectors for research and policy purposes; and
- (j) to promote development in Malawi.

---

322 Chapter XIX.
323 Given this is a 1994 Constitution, the term 'our fathers' in reference to those who came up with the Constitution may really not apply for a considerable period of time!
324 Underlining supplied.
Clearly the RBM has a lot of ‘principal’ objectives. What is worth noting is that the RBMA does not use the word ‘regulate’ as part of the principal objectives of the RBM. It is however argued that not much should be read in this as the functions of the RBM under the RBMA and FSL are both regulatory and supervisory.

The RBMA defines financial institution as any person, other than a bank, registered as a financial institution under the Banking Act. The term other financial institutions is defined to include financial institutions and pensions, assurance and insurance institutions. The Banking Act 2009 has removed the definition for a financial institution since financial institutions are now registrable under the now specific legislation comprising the FSL.

- Political structure of the central bank

The governor and deputy governor of the RBM are appointed exclusively by the President. The board of directors of the RBM is also appointed exclusively by the President and comprises the governor, deputy governor, and five other directors who may include secretary to the treasury, secretary for economic planning and development and the accountant general. The governor (or deputy governor in the governor’s absence) chairs the board of directors.

326 Section 2, RBM Act.
327 Discussed below (the RBM Act originally referred to the repealed Banking Act but should now be read as referring to the Banking Act 2009). Any reference in the text to the Banking Act is to the Banking Act 2009 and the old Act will be referred to as the repealed Banking Act).
328 Section 12 RBM Act; s 6 of the RBM Amendment Bills proposed the appointment of not more than three deputy governors (up from the present one) and not more than seven directors – see Sonani B ‘Cut President’s powers over RBM – MPS’ The Nation 10 December 2010 available at http://www.nationmw.net/index.php?option=com_content&view=article&id=10828:cut-presidents-powers-over-rbmmps&catid=11:business-news&Itemid=4 (accessed 13 December 2010).
329 Section 6 RBM Act. See Appendix D for the Current list of Board Members.
330 Section 11 RBM Act.
At independence, Malawi was a *de jure* multi-party state but a *de facto* one party state by virtue of the absolute dominance of the Malawi Congress Party (MCP). The *de facto* position of the MCP was translated into a *de jure* reality in 1966 when the country became a one party state, with Dr. Banda as Executive President. Five years later, Ngwazi Dr. H. Kamuzu Banda was proclaimed ‘President for life’ with the

---

332 There were minority parties (reflecting mainly racial lines) when Malawi became Independent in 1964 following the general elections of 1961 but this changed after 1966 and following the (in)famous “cabinet crisis” when Dr. Banda reinforced his reigns on power.

strange insertion of this proclamation in the country’s Constitution! Malawi has therefore been a de facto and de jure one-party state for most of its existence.

Through a referendum in 1993, Malawians voted for a multiparty system and in 1994 Malawi had multi-party elections with a new Constitution in place and presidential term that runs for five years with a maximum of two terms. Malawi has had only three Presidents since it became independent; Dr. Kamuzu Banda, Dr. Bakili Muluzi and Professor Bingu wa Mutharika.

During the same time, the RBM has had eleven governors since its inception in 1965. The average term of a governor since independence is approximately 4.7 years, almost equal to the 5-year post-one-party political cycle. The nominal term of the governor is 5 years and the incumbent is eligible for reappointment. The longest serving governor of the RBM was John Tembo who served during the one-party era. The shortest serving is A.G. Perrin, the first governor who only served a year.

An examination of the governor turnover rate after the advent of multiparty democracy indicates an average drop to 4.5 years. An interesting pattern is that there is a change in the governor within a year after every general election in the multiparty era. For example, Dr. Mathews Chikaonda replaced Francis

---

335 From 1966 when it became a Republic to 1994. There were minority parties when Malawi became Independent in 1964 following the general elections of 1961 but this changed after 1966 and following the (in)famous “cabinet crisis” when Dr. Banda reinforced his reigns on power.
336 Although the Constitution is designated as a 1994 legislation, the 1994 Constitution was interim and was only made sacrosanct in 1995, the notable removal from it being the senate.
340 2004-present (constitutionally up to 2014).
347 Referendum was in 1993 and General Elections were held in 1994.
Perekamoyo as governor in 1995 soon after the 1994 elections.\textsuperscript{350} Dr. Chikaonda was replaced by Dr. Elias Ngalande in 2000 after the 1999 elections whilst Dr. Ngalande himself was replaced by Victor Mbewe in 2005 after the 2004 elections.\textsuperscript{351} Mbewe was replaced by the current Governor, Dr. Perks Ligoya, months after the May 2009 general elections.\textsuperscript{352} But as Kalilombe cautions, ‘care should be taken in interpreting these values because low turnover sometimes may mean lower independence of the Central Bank. A subservient governor may stay in the seat for a longer time if he does what the politicians want him to do.’\textsuperscript{353}

John Tembo was a long time Banda confidant. It is submitted that Tembo’s long survival was exactly because he was part of the MCP structure and represented the executive interest and was therefore seen as subservient.\textsuperscript{354} The influence of the executive arm (especially the presidency) on the RBM through the appointment of its governor and board is therefore self-evident, especially in the post-one-party era where each presidential term seems to coincide with a new governor of the RBM. Clearly this cannot be a mere coincidence and is reflective of different policy views of not only each president but each term of each presidency. It can therefore be said that from an analysis of the available information, the conclusion could be drawn that currently the job of governor of the RBM is a very precarious one providing no security of tenure.\textsuperscript{355}

- The central bank as regulator and supervisor of financial institutions

The FSL makes the RBM the regulator and the supervisor of financial institutions in Malawi. Most of the FSL is new law and the RBM has been in existence since 1965. The RBM may have changed with time, but it is submitted that it has only adapted based on its original mandate. The avalanche of laws comprising the FSL may therefore be too much for the RBM considering that it has a plethora of other principal functions.\textsuperscript{356}

\textsuperscript{350} Kalilombe (2008) 41.
\textsuperscript{351} Kalilombe (2008) 41.
\textsuperscript{353} Kalilombe (2008) 20
\textsuperscript{354} He was still Treasurer-General of the Party!
\textsuperscript{355} See Appendix E for a complete list of Governors of the RBM and the years served.
\textsuperscript{356} Actually supervising financial institutions is but one of the 10 principal functions of the RBM – see s 3 RBM Act.
Malawi is however not unique in having a central bank as the regulator and supervisor of the financial sector. The Netherlands, Antilles, Singapore and Uruguay are some of the countries with the peculiar regulatory system where the central bank and not a separate agency regulate securities firms and insurance companies as well as banks.\(^{357}\) The fact that it is a rather unique, and in some ways peculiar system means it may not provide the best results and if one looks at the data which reveals that the executive (presidency) has a firm grasp of the central bank through the authority to appoint the governor and the board, then whilst the central bank maybe the *de jure* regulator, the President is the *de facto* regulator and supervisor of financial institutions. This, it is submitted, is a not an ideal situation for financial growth. It is further submitted that that the RBM may not pass an objective test of independence.

- Regulatory structure of the central bank

By law the RBM is the single regulator regulating and supervising all financial sectors including banks, pension services, insurance companies, discount houses and the MSE. To achieve its supervision and regulation, the RBM employs the *silō matrix*\(^ {358}\) of financial services regulation and supervision.

The head office of the bank is in the capital city, Lilongwe and the bank has one branch in Blantyre,\(^ {359}\) although a second branch is being built in Mzuzu. The head office is charged with all the functions of a central bank.\(^ {360}\) The main function of the branch in Blantyre is currency issue and supervision of financial institutions.\(^ {361}\) All the banks and financial institutions are headquartered in Blantyre although there is a slow trek to the capital.\(^ {362}\) This may explain why the Blantyre branch of the RBM was tasked with supervisory powers.

---

\(^{359}\) SADC Bankers: Reserve Bank of Malawi (2011) 98.

\(^{360}\) SADC Bankers: Reserve Bank of Malawi (2011) 98.

\(^{361}\) SADC Bankers: Reserve Bank of Malawi (2011) 98.

\(^{362}\) Standard Bank has announced it will move, but it seem the only bank to have thus indicated. About a decade ago, NBS Bank moved to Blantyre to “the Banking Square” which houses most of the headquarters of all the banks in Malawi.
The bank has its own budget approved annually by the board\textsuperscript{363} but in view of the manner in which the board is appointed, it is submitted that this does not offer the requisite budgetary independence.

\begin{figure}[h]
\centering
\includegraphics[width=0.8\textwidth]{rbm_structure.png}
\caption{The structure of the RBM as it relates to supervision of financial institutions.\textsuperscript{364}}
\end{figure}

The RBM operates a rather slim \textit{silhouette} matrix with only three\textsuperscript{365} silos:
- bank supervision,
- micro-finance & capital markets supervision, and
- pension & insurance supervision.

It is submitted that bank supervision must be construed broadly to include other financial institutions that do not fall in the other two categories. The three directorates in fig 5 below are therefore for all the supervision and regulation falling under their

\textsuperscript{363} SADC Bankers: Reserve Bank of Malawi (2011) 97.
\textsuperscript{364} Extracted from the organisational structure of the RBM.
\textsuperscript{365} A recent improvement from two in 2009.
directorates (silo). From this slim structure it can be seen that the directorates have a lot on their plate.  

![Diagram of silos]

**Fig 5.** The 3 silos under which regulation and supervision is structured within the RBM.

### 3.2.3. Banking Act 2009 (BA2009)

The BA2009 defines a bank as a person who conducts banking business in Malawi and banking business is defined as the business of receiving deposits or deposit substitutes from the public that are payable with or without interest or after the expiry of a stated period or that are transferable by cheque or other means.  

No person may operate as a bank without a banking licence granted by the RBM and only a licensed bank can advertise that it performs banking services in Malawi. The registrar has the power to require an institution be licensed as a bank if he determines that the institution is in fact engaged in banking business.

---

366 With the passing of The Pensions Bill, the Pension & Insurance Directorate may have resultantly attained further expansive powers.

367 In light of the repeal of the Capital Markets Development Act, it is submitted that the Directorate responsible for Micro-Finance & Capital Markets is also responsible for the Securities Markets.

368 Section 2(1) Banking Act 2009 (hereafter Banking Act).

369 The Registrar shall not license a person as a bank unless the person is a body corporate – s 4(2) Banking Act.

370 Section 2(1) Banking Act. The licence is granted under the Financial Services Act.

371 Section 44 Banking Act.

372 Section 4(3) Banking Act.
The BA2009 does not define who the registrar of banks is but provides that words and expression in the act have the meanings ascribed to them in the Financial Services Act 2010 (FSAM). The BA2009 provides requirements and conditions for licensing, prudential supervision and monetary supervision. A rather broadly vague licensing condition is the interest of the national economy and the public interest. The prudential supervision is however periodical or at the registrar’s discretion. The BA2009 also provides for winding up of banks over and above any other law. The registrar has power to act on troubled banks including placing them under statutory management or even closure. Where a bank is being wound up or liquidated, a court of law shall not entertain any application for a stay of such proceedings unless the application is brought by the registrar, who may also be the liquidator.

3.2.4. The Securities Act 2010 (SA2010)

The SA2010 is the successor to the CMDA and expansively defines securities. Securities may be as defined in the statute or as prescribed by the registrar. The SA2010 defines the registrar as the registrar of financial

---

373 Section 2(3) Banking Act. As will be seen later the Registrar is the Governor of the RBM. The registrar has the statutory authority to supervise banks. Section 14 Banking Act.

374 Part II, including limitation of shareholding [s 6], limitation of controlling more than one bank [s 6(4)] and approval of proposed bank directors [s 5(1)(c)] or their removal or suspension for sufficient cause [s 48(3)(a)/(b)].

375 Part III including maintenance of adequate capital – s 10(1).

376 Part V (Such as minimum liquidity reserve requirements). Overall objective is to protect the external value of the Kwacha, monetary equilibrium and other economic objectives – s 38(1)

377 Section 5(1)(j) the Banking Act does not provide for who determines this or how it is determined. It is subjected that this may potentially be abused.

378 S.14(1) Banking Act.

379 The powers of a liquidator are subject to the approval and control of the Registrar but any creditor may apply to the High Court for review with respect to the exercise of those powers – s 30(3)

380 Section 29(1) Banking Act. This is because banks are normally incorporated under other laws such as Companies Act, 1984 (hereafter Companies Act).

381 Section 26 Banking Act.

382 If a bank is placed under statutory management, the board of directors stands suspended – s 27(9)(a).

383 Section 27 Banking Act.

384 Section 30(8). It is submitted that this is discriminatory and may be challenged.

385 See s 32(5) Banking Act. This may not provide the much needed checks and balances and the regulator may become too powerful – see discussion on the regulator having an ‘agenda’ of his own.

386 Section 2 Securities Act 2010 (hereafter Securities Act) : Securities includes shares, debentures etc and any warrant, right or option or interest in respect of such and any instrument including derivative instrument, contract, profit-sharing agreement, fractional interest, right to subscribe or any instrument commonly known as securities.

387 Section 2 Securities Act.
institutions appointed under the FSAM. The registrar is empowered to license and supervise and regulate activities of players in the securities market. He has to approve constitutions, charters and articles governing and pertaining to any stock exchange. By virtue of succeeding the CMDA, the SA2010 is the legislation under which the Malawi Stock Exchange (MSE) now operates. The SA2010 however makes provision for licensing of more than one stock exchange (apart from the MSE). The statute promotes the development of self-regulation by stock exchanges.

The SA210 provides that a stock exchange can only exist if it is licensed under the FSAM and it is an offence to do otherwise. When granting a licence the registrar shall consider if it is in the public interest having regard to the nature of the securities industry. Any registered stock exchange shall be managed by a board appointed in accordance with its articles of association. The registrar is empowered, in the interest of the investing public, to give directives with respect to trading on the stock exchange generally or with respect to trading in particular securities listed on the stock exchange. The registrar also has powers to approve rules of the stock exchange or any amendment thereto and even on his own motion to add, amend, delete or nullify rules in the interest of protecting the investors and fair administration of the exchange. All security brokers, dealers, investment advisors, portfolio managers, securities market intermediaries and securities representatives are

---

388 Section 2 Securities Act.
389 Section 4(b) Securities Act. The regulation is by means of issuing directives s 4(d) and s 5.
390 Section 4(c). This may look intrusive but a necessary prudent regulation protecting investors.
391 Section 9(1) Securities Act.
392 Part III Securities Act especially s 7(1).
393 Section 4(k) Securities Act. The MSE was formed as a Self-Regulating Organisation (SRO). It is submitted that pursuant to this section, the MSE may not have lost that status.
394 Section 6(1) Securities Act.
395 Section 6(2) Securities Act.
396 Section 7(3)(a) Securities Act however it does not provide for who determines the ‘public interest’ or how it is determined. It is once again subjected that this may open to be abuse and other political considerations.
397 Section 8(1) Securities Act. The use of ‘articles of association’ would denote that the stock exchange must be registered as a company under the Companies Act first.
398 Section 11(1)(a) Securities Act. This may indeed be necessary to protect investors in case of a sudden crash of prices in one traded security or across the whole exchange. This includes closing of the stock exchange (only after consultation with the Minister) for the transaction of dealings in securities for such period as may be specified – s 12(1).
399 Section 13(3)(c) Securities Act.
400 Section 13(4) Securities Act. This power seems somewhat too wide as it does not provide how the Registrar is really to make this determination and this may be open to arbitrary application.
401 Who must be an employee of a broker, dealer, investment adviser, portfolio manager or an operator of a collective investment scheme – s 18(3).
required to obtain a licence before operating. The SA210 also requires that each security be registered by the registrar before it can be traded.

Unlike the CMDA, the SA2010 has a provision dealing with insider trading. The SA2010 also seems to attempt to regulate what can be described as legal pyramid schemes under the umbrella of collective investment schemes. Reading through the SA2010, it is clear that in Malawi trading on the stock exchange can only be done with registered securities and public stock.

3.2.5. Microfinance Act 2010 (MFA2010)

Under the MFA2010, no person can carry on business as a microfinance service provider unless registered or licensed under the FSAM, however, a licensee may apply to the registrar for approval to offer products and services under the Banking Act, Financial Cooperatives Act or the Insurance Act. A microfinance institution shall have as its primary function or business the provision of microfinance services and no more than five percent of the investible funds of a microfinance institution shall be invested in non-financial activities or assets unless permitted by the registrar.

The registrar may determine a threshold in terms of assets or services for a licensed non-deposit taking microfinance institution, as a group or individually, and upon attainment the registrar shall place such an institution under prudential

---
402 Sections 17(1) & 18(1) Securities Act. Operating without a licence amounts to an offence – s 17(2).
403 Section 27(1) Securities Act 2010 excluding Treasury Bills or RBM Bills – s 27(4)(a).
404 Section 49 Securities Act. Although in s 5(g) of the Capital Markets Development Act the RBM had the task to prevent unfair trading practices and abuse of inside information.
405 As opposed to the get-rich schemes that have been described as illegal. The usage of the term pyramid is actually a misnomer since in collective schemes there is no pyramid structure with a few at the top benefitting from the entry into the scheme of the others.
406 Part IX Securities Act.
407 Section 5 Microfinance Act 2010 (hereafter Microfinance Act).
408 The preamble specifically says ‘an Act to provide for the regulation and supervision of microfinance services...’ Most of the preambles in the other legislation making up the FSL just have ‘an Act to regulate ...’ without including supervision see Banking Act 2009, Securities Act 2010. It would seem that the ‘new’ acts all have regulation & supervision as the purpose – Credit Reference Act 2010, Insurance Act 2009, Financial Security Act 2010.
409 The act does not define the registrar but it is submitted that the registrar of other financial services applies mutatis mutandis.
410 Section 7 Microfinance Act.
411 As defined by the Act.
412 Section 14 Microfinance Act.
regulation\textsuperscript{414} as defined in the FSAM.\textsuperscript{415} Only institutions incorporated as a company\textsuperscript{416} may be licensed as a deposit-taking microfinance institution.\textsuperscript{417} The law also places limitations on institutions. Microfinance institutions are limited to owning shares in any company or enterprise of no more than ten percent of the sum of its capital and reserves\textsuperscript{418} and not to grant any credit facility to any debtor in excess of ten percent of its capital\textsuperscript{419} or not to have investment in immovable property that in aggregate exceed the sum of its capital and reserves.\textsuperscript{420}

The microfinance register shall be available for inspection by the public at the office of the registrar during workings hours.\textsuperscript{421} The registrar may by directives prescribe the composition of the board, frequency of board meetings, rules of appointment, responsibilities and additional qualifications of the directors of microfinance institutions.\textsuperscript{422} It is submitted that this is very intrusive and not necessary to achieve any prudential regulation.\textsuperscript{423} The MFA2010 also requires that the management of any microfinance institution comprise at least a chief executive officer and one senior management officer such as chief financial officer or head of operations.\textsuperscript{424} It seems strange that the act should designate the positions for institutions, most of which are private and who may opt for their own structure.\textsuperscript{425} It is therefore submitted that these positions are of guidance, that is.

\textsuperscript{414} A prudential regulated financial institution includes a bank, licensed microfinance institution, securities exchange, securities deposit & broker, insurer & reinsurer credit and savings cooperative, a pension fund & an umbrella fund, a building society, credit reference bureau. Basically the definition covers all the relevant financial institutions plying their trade in the Malawian financial market.

\textsuperscript{415} Section 16(1) Microfinance Act. Where this determination is made, the institution is required to be incorporated as a company limited by shares under the Companies Act – s 16(2)(a)

\textsuperscript{416} Limited by shares as defined in the Companies Act.

\textsuperscript{417} Section 18 Microfinance Act. The registrar shall determine minimum capital or loan fund requirements whichever is applicable, for different categories of microfinance institutions- s 36(1).

\textsuperscript{418} Section 39(1)(c) Microfinance Act although this may be waived depending on the nature of business carried on by certain microfinance institutions s 39(2).

\textsuperscript{419} Or other such limited as the registrar may prescribe – s 39(1)(a).

\textsuperscript{420} Section 22(1) Microfinance Act. There is only one problem with this, the RBM is a bank and a very secured one. Entry into it albeit being a bank is very restricted. The author’s experience in the course of collecting information for this research is such that the RBM is not the best placed institution for a public inspection. The only consolation maybe that s 22(2) provides the publication through print and electronic media particulars of all registered, licensed and approved persons contained in the register.

\textsuperscript{421} Section 25(2) Microfinance Act.

\textsuperscript{422} The Act goes on to list the (strange) requirement of prior approval for \textit{inter alia} appointment of directors, opening of branch or establishment, restructuring. On the other hand, the other requirements such as going into liquidation, closing a branch or establishment are actually essential – s 26 Microfinance Act.

\textsuperscript{423} Section 27(1) Microfinance Act.

\textsuperscript{424} Depending on origin, ownership structure etc.
there must be at least a top officer and one heading finance and another heading operation, regardless of their titles. The requirement for prior approval by the registrar of the appointment of key management officers including the chief executive officer seems intrusive as well.\textsuperscript{426} It is submitted the registrar should provide guidelines on qualifications and attributes but not approval.

Winding up of non-deposit taking microfinance institutions can only be instituted by the registrar by petition to the High Court.\textsuperscript{427} For deposit-taking institutions, the rules applying to prudentially-regulated microfinance institutions in the FSAM apply \textit{mutatis mutandis}.\textsuperscript{428} The MFA2010 has a curious provision regarding regulations. It says the power to make regulations by the minister does not extend to making regulations about a matter in respect of which the registrar may issue directives.\textsuperscript{429}

3.2.6. Insurance Act 2009 (IA2009)

The principal objective of the IA2009 is to make provision for the enhancement of the safety, soundness and prudent management of insurers and other persons involved in the insurance industry in Malawi with the aim of protecting the interests of insurance policyholders and ensuring the highest standard of conduct of business of insurance companies, brokers and agents.\textsuperscript{430} The IA2009 defers licensing and registration procedures to those of the FSAM.\textsuperscript{431}

The registrar of the insurance industry is the registrar of financial services appointed under the FSAM\textsuperscript{432} but licences the industry pursuant to the IA2009.\textsuperscript{433}

\textsuperscript{426} Section 27(3) Microfinance Act. It should be noted that in this subsection, the article used is “the” not “a” for chief executive officer which may denote the top person must be designated as “chief executive officer”. It is submitted though that this need not be the case and “the” should be read as to mean “a”. The requirement in s,28 that persons meet minimum requirement before being appointed as director or in top management is what should have been the only guiding provision in the law for appointments .

\textsuperscript{427} Section 49 Microfinance Institutions. The section does not properly deal with cases where the need to wind up is by the shareholders (whether voluntary or involuntary liquidation).

\textsuperscript{428} Section 50 Microfinance Act.

\textsuperscript{429} Section 56(4) Microfinance Act. Curious because under the Malawian legal system, Ministers are statutorily empowered to make subsidiary regulation and this must be laid down before Parliament and has force of law and to make the registrar directive which is not open to an accountability process as that of a minister almost untouchable seems strange and out of the ordinary.

\textsuperscript{430} Section 3 Insurance Act 2009 (hereafter Insurance Act). The Act differentiates and defines insurers (and the different types of insurers : general, life, local, reinsurer) from brokers and agents in s 2.

\textsuperscript{431} Section 5 Insurance Act.

\textsuperscript{432} Section 2 Insurance Act.
The Registrar may not license a person to carry out both life insurance business and general insurance business. It is submitted that person here should be narrowly construed. For example, in Malawi, NICO holdings is the parent company of NICO Life and NICO General insurance ‘companies’ and if NICO Holdings were to be taken as the person then it would not be possible to have this situation. It is submitted that the corporate veil may need to be lifted here because the intention of the legislature may be circumvented by the creation of subsidiaries and giving them separate legal personality.\textsuperscript{434}

The registrar shall not grant a licence if it is would not be in the interest of the public and policyholders to do so\textsuperscript{435} and no insurer shall commence his business until the registrar has approved the commencement.\textsuperscript{436} Insurers (and reinsurers), brokers and agents are all required to be registered and licensed before their can operate their businesses.\textsuperscript{437} The law states categorically that payment of premiums by policyholders under their insurance to an agent or broker shall be deemed to be specific performance under the policy.\textsuperscript{438}

The law also restricts insurers in the investments that they can undertake. They cannot except with prior written approval of the registrar acquire more than ten percent of the outstanding voting share capital of a body corporate,\textsuperscript{439} the

\textsuperscript{433} See s 8(1).
\textsuperscript{434} See Annex C. To make matters more interesting, NICO Holdings is the majority shareholder (\textit{de facto} owner) of NBS Bank Ltd, another financial player. To the average person on the street, any attempt to convince them that there are actually 3 entities in NICO (NICO Holding, NICO Life and NICO General) would be met with surprise. This is compounded by s 26 which provides that if a life insurance company holds assets in a holding company, those shares shall be deemed to be held by the insurer as trustee for the benefit of the owners of the polices to which the liabilities relate.
\textsuperscript{435} Section 9(1) Insurance Act. Strange that policyholders are included in this provision since when the insurer is applying for license there are clearly no policyholders as far as he is concerned. Ss.34(10)(e) and 40(1)(f) provide that an agent or broker shall not conduct their business contrary to the interest of the public in Malawi. Once again the Act does not define how this interest of the public is to be ascertained.
\textsuperscript{436} Section 10 Insurance Act ; meeting of shareholders has been duly held and other legal formalities complied with, insurer has complied with the requirements of the registrar’s directives regarding capital and reserves, insurer has entered into a reinsurance agreement with a reinsurer acceptable to the registrar, the insurer has on deposit(sic) an amount acceptable to the registrar, all other provisions of the Act and other relevant financial service laws have been complied with
\textsuperscript{437} See Part II and Part V Insurance Act.
\textsuperscript{438} See Section 46(2) Insurance Act. In Malawi Specific Performance is part of contract law and can be enforced or ordered and it is submitted this provision was put to protect policyholders from agents and brokers who never remitted premiums to the insurers. Now the onus shifts to the insurers to ensure they have trustworthy brokers and agents. Clearly this is an application of law of agency that the principal should be bound by the conduct and dealings of his agent.
\textsuperscript{439} Or 10% of beneficial interest in an unincorporated entity.
aggregate value of all such shares\textsuperscript{440} to exceed seventy-five percent of the actual liabilities of the insurer or acquire real property or any improvement thereon whose aggregate value is twenty-five percent for life insurers\textsuperscript{441} and ten percent for general insurers.\textsuperscript{442} Insurers are also required to have their assets invested in Malaŵi with sufficient regard to the consideration of liquidity, return and security.\textsuperscript{443} The registrar may prescribe prudential limits for consumer and commercial lending by insurers in proportion to their assets.\textsuperscript{444} No person may acquire a controlling share\textsuperscript{445} in an insurer\textsuperscript{446} without the prior approval of the registrar.\textsuperscript{447} The winding up of an insurer or a broker\textsuperscript{448} shall be according to the Companies Act and the FSAM\textsuperscript{449} but the registrar shall not approve the winding-up until all policyholders are paid or transferred to an alternative insurer.\textsuperscript{450}

The law also provides for the prior approval of the registrar for the appointment of executive officers\textsuperscript{451} and directors, change in articles of association, opening and closing branches, financial restructuring and liquidation.\textsuperscript{452} Every insurer should by law pay out claims no later than fourteen days after signing a claim of discharge certificate.\textsuperscript{453} The issue of ‘small print’\textsuperscript{454} has also been addressed as

\begin{footnotesize}
\textsuperscript{440} And beneficial interests.
\textsuperscript{441} Of actuarial liabilities.
\textsuperscript{442} Of total assets – s 50 Insurance Act.
\textsuperscript{443} Section 52 Insurance Act. However this is subject to the articles of association of the insurer and any other reasonable constraints imposed on the insurer by other rules in respect of the manner in which it may invest its assets.
\textsuperscript{444} Section 53 Insurance Act.
\textsuperscript{445} Controlling here means having a significant interest in any class of shares of the insurer.
\textsuperscript{446} Or an entity that holds shares of the insurer.
\textsuperscript{447} Section 55(1) Insurance Act.
\textsuperscript{448} Which are companies within the meaning of the Companies Act.
\textsuperscript{449} Section 57 Insurance Act. This seems to be a departure from the way winding up of other financial institutions is done i.e. banks, microfinance institutions.
\textsuperscript{450} Section 58 Insurance Act. Under a scheme for the transfer or the amalgamation of policyholders in accordance with the provisions of the Financial Services Act.
\textsuperscript{451} The law does not specify the positions \textit{cf} with s 27(1) Microfinance Act.
\textsuperscript{452} Section 62 Insurance Act. The criticism against this power by the registrar with regarding to the other financial services law discussed equally applies here so does the need to protect policyholders.
\textsuperscript{453} Section 65(1) Insurance Act. It would seem 14 days may have been overly ambitious. The author has experience of a claim that took just over a month even after the enactment of the enactment of this law, and this was quite fast compared to the normal insurance processing rate experience that the authors has had before. The fact that the quoted this provision when making a demand for payment clearly played no small part in the fast processing! Therefore the law may have jostled the insurance companies into speedy action but the 14 days may be too short to be fair on them (they have to verify the claim and sometimes use contracted services for this).
\textsuperscript{454} Small print in insurance is usually used to denote the very small print that one cannot read when signing the policy but when the time arises to make a claim against the policy then voila the small print gets magnified and the claim is defeated.
\end{footnotesize}
no insurer shall issue a policy in a form whose provisions are not put in a clear
type face in letters of uniform size no less than ten points.455

3.2.7. The Credit Reference Bureau Act 2010 (CRBA)

This is a new addition to the Malawí legal system as there was no regulatory or
supervisory statutory framework for credit reference bureau operation. The CRBA
defines the registrar as the registrar of financial institutions appointed under the
FSAM456 and no person shall conduct credit reference bureau business unless
licensed under the FSAM.457 The law also restricts licences to juristic persons
which are limited liability companies.458 Public interest is not one of the criteria for
licensing a credit reference bureau.459

The CRBA is likely to change the facet of credit life of Malawians as a credit
reference bureau has the statutory authority to collect information on the
background and credit history of persons required by it.460 This may be welcomed
as a positive development by those who want to access credit but also as an
intrusion into the right of privacy of others.461 The bureaus are also likely to face
problems as the law require them to collect not only postal but also physical
addresses.462 Most Malawians do not have a physical address463 because most of

455 Section 72 Insurance Act. Of course different type face produce different sizes so a ten point in
‘Arial’ may be different from one in ‘Times New Roman’ and in ‘Lucinda Console’ and ‘AngsanaUPC’
so maybe the issue of small print has not been completely done away with and the only
qualification maybe be that it be in ‘a clear type face’.

456 Section 2 Credit Reference Bureau Act 2010 (hereafter Credit Reference Bureau Act).

457 Section 4(1) Credit Reference Bureau Act.

458 Section 4(2) Credit Reference Bureau Act. In Malawi a company may be incorporated limited by
shares or limited by guarantee ss 2, 5(1)(a)/(b) Companies Act 1984. The provision does not state
which. It may therefore be that even a company limited by guarantee (though not regarded as a
company in the business and commercial sense – mostly an easy means of incorporation for most
NGOs) may be licensed as credit reference bureau. The Courts may have to give directions on this
though as the jurisprudence on this branch of law which is at the starting blocks develops.

459 See s 6 Credit reference Bureau Act 2010. This may not be required because of the other
requirements i.e. security features to protect the database, background, reputation, integrity,
competence and expertise etc. It is submitted that indeed such requirements should be the norm
and that the vague notion of ‘public interest’ should not be in the law, i.e. the requirements should
be such that they do take care of the public interest.

460 Section 13(1) Credit Reference Bureau Act.

461 Section 21 of the Constitution provides for the Right to Privacy whilst s 19 provides the right to
dignity and personal freedoms. It is submitted that litigation is most likely to follow should a
person’s credit history be (accidentally or otherwise) become public knowledge since s 5 makes
any law inconsistent with provisions of the Constitution invalid to the extent of that inconsistency.

462 Section 13(2) Credit Reference Bureau Act.

463 Whilst they may have a place where they physically reside, this place is usually not ascertainable in
a definite manner.
the streets are not named and the ‘culture’ of physical addresses is usually limited to registered entities.

However a credit reference bureau does need prior written approval of the registrar for the appointment of directors and senior management, changes in articles of association, opening\textsuperscript{464} and closing of branches and liquidation.\textsuperscript{465} The CRBA also restricts the power of the minister to make regulations in matters in respect of which the registrar may issue directives.\textsuperscript{466}

3.2.8. Building Society Act 1964 (BSA)

This legislation is now of limited application. Malaŵi had for a long time one building society, the New Building Society which later on turned into a bank, NBS Bank.\textsuperscript{467} No new player has really come into the building society market although there have been some endeavours by private entrepreneurs.\textsuperscript{468} Although NBS Bank still operates a ‘mortgage’ service, this is not under the umbrella of a building society but of a bank. The same facilities are offered by other banks.\textsuperscript{469}

The BSA contains however, an anomaly which is inconsistent with the FSL. Under the BSA, the minister is empowered to appoint a public officer to be registrar of building societies\textsuperscript{470} and in pursuance of this power the minister designated the secretary to the treasury\textsuperscript{471} as the registrar of building societies.\textsuperscript{472} It is submitted that this provision may have to be amended in light of the current FSL where there is one

\textsuperscript{464} See the criticism regarding this discussed in the earlier sections having similar restrictions
\textsuperscript{465} Section 17 Credit Reference Bureau Act.
\textsuperscript{466} Section 33(2) Credit Reference Bureau Act.
\textsuperscript{467} Owned by NICO Holdings, arguably one of the biggest players in the Malaŵi financial system (owns NICO Life, NICO general and several subsidiaries in other countries).
\textsuperscript{468} For example the Kanengo Northgate Project in the outskirts of the Capital City near the Kamuzu International Airport. Most Malaŵians remember the New Building Society for its reposing and selling of houses than for its provision of loans. The fact that most of the loans became delinquent may be symptomatic of is wrong economic fundamentals applied such as unaffordable interest rates, sometimes on compound basis.
\textsuperscript{469} In fact the vehicle of ‘mortgage’ has fast been replaced with ‘charge’ and it is more common to hear of a charge than a mortgage although the terms are interchangeably used. The Act does not define “charge” but employs the term in its provisions.
\textsuperscript{470} Section 5 Building Society Act 1964 (Chap 32:01). (hereafter Building Society Act).
\textsuperscript{471} Who sits on the Board of the RBM as an Ex-officio and is mostly the most powerful civil servant next to the Chief Secretary to the President and Cabinet.
\textsuperscript{472} G.N. 111/1965 through subsidiary legislation as the Act did not designate a registrar but provided for registration and functions of a registrar.
registrar for all financial institutions. Since in Malawi the secretary to the treasury falls directly under the minister of finance, this makes the executive branch the de facto and de jure registrar of building societies. This is more so because the minister may, if he is satisfied that it is in the public interest so to do, suspend the registration of new societies either indefinitely or for a stated period and during such period the registrar shall not register any new society and in any particular case direct the registrar that registration of a proposed society shall be refused.

Apart from the FSAM, the BSA is the only other FSL which contains a personally liable indemnity provision of the registrar and other persons acting under his authority for or in respect of any act or matter done in good faith in the exercise of the powers conferred by the Act. Under the BSA, the applicant for registration does not have to be a juristic person as any four or more persons who agree jointly to subscribe to permanent shares of the society to an amount of not less than £20,000 may form a

---

This is an old law that was carried over from the colonial period and is in urgent need of revision. For example any person using the word ‘building society’ without being registered by the registrar will incur a fine of £500 and £50 for each day for which such contravention continues s 3(3) Building Society Act. Using Pounds Sterling 47 years after Independence is gross! By publication in the Gazette. The phrase “if he is satisfied that it is in the public interest so to do to ” and “if he finds it reasonable in the public interest to do so” has been hotly debated in view of the recent change of a similar provision but of banning publication in s 46 of the Penal Code in Malawi. It is submitted that the latter whilst being contested as impugning upon constitutional freedoms is a better provision as it is subject to judicial review under the Wednesbury reasonableness test of administrative law. In Associated Provincial Picture Houses v Wednesbury Corporation [1947] 2 All ER 680 CA Lord Greene MR said at 682-3:

‘It is true the discretion must be exercised reasonably. Now what does that mean? Lawyers familiar with the phraseology commonly used in relation to exercise of statutory discretions often use the word “unreasonable” in a rather comprehensive sense. It has frequently been used and is frequently used as a general description of the things that must not be done. For instance, a person entrusted with a discretion must, so to speak, direct himself properly in law. He must call his own attention to the matters which he is bound to consider. He must exclude from his consideration matters which are irrelevant to what he has to consider. If he does not obey those rules, he may truly be said, and often is said, to be acting unreasonably.” Similarly, there may be something so absurd that no sensible person could ever dream that it lay within the powers of the authority. Warrington LJ ... gave example of the red-haired teacher, dismissed because she had red hair. That is unreasonable in one sense. In another sense it is taking into consideration extraneous matters. It is so unreasonable that it might almost be described as being done in bad faith; and, in fact, all these things run into one another.’

Section 8(4)(a)/(b) Building Society Act. This seems to be much like absolute discretion and in such a case the ‘Wednesbury reasonableness’ test would not avail itself to anyone prejudiced by the provision.

Section 98 Financial Services Act. But in the act the indemnity extends to other financial institutions and their officers in relation to provision of information to the registrar or any person under his authority in compliance with a financial service law unless it is proved that the provision of information was done in bad faith.

Section 6 Building Society Act.

Person includes the Government; s 2 Building Society Act.
society by subscribing their names and addresses to rules agreed by them for the
government of such society and by obtaining registration under the Act.479

Only the registrar may, with the approval of the minister, and in accordance with rules
made by the Chief Justice, apply to the High Court for an order for the dissolution of
the society.480 The registrar is however empowered to order dissolution of the society
if satisfied that the society is unable to meet the claims of its depositors, and that it
would be for their benefit that it should be dissolved.481 The BSA does not require
approval of the registrar for appointment of directors and leaves this to the members
of the society.482 Because it also offers legal personality on societies, the BSA
contains a lot of administrative and organisational provisions.483

3.2.9. Financial Services Act 2010 (FSAM)484

The FSAM is the umbrella legal framework for the supervision and regulation of
financial institutions in Malawi.485 The Act defines a financial institution to include a
bank, and institutions defined as such in the Securities Act, Insurance Act,
Microfinance Act, Financial Cooperatives Act,486 Pension Act,487 Credit reference
Bureau Act and the Building Society Act.488 This definition basically includes any

---

479 Section 8(10 Building Society Act upon the issuance of a certificate by the registrar s 8(5).
Section 11 says upon such registration, the society shall be a body corporate by its registered name
with perpetual succession and, subject to the Act, shall be capable of doing all such acts as a body
corporate may by law perform.
480 Section 14 Building Society Act but dissolution may occur voluntarily under the supervision of the
High Court s 85(1)(b) or by the High Court s 85(1)(c). It is submitted this leaves the door open
for creditors to bring applications for dissolution under s 87(1)(c) and/or the Bankruptcy Act.
481 Section 91 Building Society Act.
482 Section 19 Building Society Act.
483 As would be found in the Companies Act or the Trustees Incorporation Act.
484 Section 2 defines the following as forming the Financial Service Law (a) Financial Services Act 2010
(b) The Banking Act 2010 [sic] (c) Building Society Act (d) Insurance Act 2010 [sic] (e) The Pension
Act 2010 [sic] (i) The Reserve Bank of Malawi Act (j) Bill Credit Reference Bureau Act, 2010 (j) a law
that declares itself to be a financial service law for purposes of this definition (l) a law prescribed
for the purposes of this definition and includes regulations, the registrar s directives and directions. The
Pension Bill has just been passed and the Financial cooperatives Bill is yet to be passed.
485 Preamble to the Financial Services Act 2010 (hereafter Financial Services Act). Its principal object
is ensure (a) safety and soundness, (b) highest standards of conduct of business, (c) fairness,
efficiency and orderliness in the financial sector (d) stability of the financial system and (e)
reduction and deterrence of financial crime in financial institutions s 3.
486 Although it is stated as an Act in the Financial Services Act, the Financial Cooperatives Bill has just
been enacted in 2011.
487 Although it is stated as an Act in the Financial Services Act, the Pensions Bill is yet to be enacted
according to law.
488 Section 2, Financial Services Act, cf s 2, Reserve Bank of Malawi Act which is more general
institution dealing with financial or financial-like services in Malawi. The FSAM defines a controlling party of a financial institution as a director or a person who holds at least ten percent of shares, voting or other rights.

Under the RBMA, the central bank, is the statutory regulator of the financial services sector and the governor of the RBM is the statutory registrar of the financial service sector. The law states the registrar shall be supported by adequate structures and employees with appropriate skills to enable him perform the duties of the registrar. The FSAM in a way gives directions to the silo nature of the regulatory framework. The registrar's power includes creating appropriate structures and establishing departments to supervise the operations of banking, insurance, pension benefit fund schemes, securities markets entities and other areas deemed necessary. Schematically this arrangement may be presented as:

![Diagram of regulatory framework]

**Fig 6.** Note how but for the “Others” departments, it closely resembles the existing RBM structure (fig 5). It is submitted that this resemblance is actually by design and the RBM has combined the others into the directorate dealing with microfinance & capital markets.

---

489 Both juristic and natural persons.
490 Financial services means services relating to financial matters – s 2 Financial Services Act.
491 Or anyone with the power to appoint or give consent to the appointment of a director provided that the registrar or the minister shall not be construed as such.
492 Section 5(2)(a) Financial Services Act. The other rights are the one which if exercised would result in the person holding at least 10% shares or voting rights - s 5(2)(a)(vi). However the registrar may modify these requirements by directives either generally or in a class of cases – s 5(4) and the registrar may declare in writing that a specified person is or is not a controlling party of a prudentially regulated financial institution – s 5(5).
493 Section 3 The Reserve Bank of Malawi Act.
494 Section 8(2) Financial Services Act.
495 In addition to his other functions, he has the function of advising the minister on matters related to financial institutions and financial services whether on his accord or on the minister’s request – s 9(2). The minister is not defined but it is submitted it is the minister responsible for finance.
496 Section 8(3) Financial Services Act. The RBM is also enjoined to support the registrar in carrying out his functions – s 9(1).
497 It may well be argued that since the Financial Services Act is a ‘baby’ of the RBM, the law was tailored to fit the structure already in existence.
498 Clearly the structure takes cognizance of the fact that in Malawi there are no longer any building Society to regulate and supervise.
The registrar is empowered to delegate any of his supervisory functions\(^{500}\) and it is hereby submitted that in fact the directors in fig 5 have been thus delegated and for all intent and purposes exercise this power for the industry they regulate and supervise.

The FSAM requires all financial institutions wishing to operate as a business to be licensed or registered under it\(^{501}\) or any other financial service law.\(^{502}\) The Act uses the terms license and register interchangeably and does not define them in a way that would distinguish them.\(^{503}\) It is submitted that registered would be the process of being enrolled in the register\(^ {504}\) whilst licensing pertains to a legal right/authority\(^ {505}\) to operate. It may however not be inconceivable for both the licence (document) and certificate of registration to be issued and this may happen when the licensing is bound for renewal whilst the registration may be a once off situation.\(^ {506}\) The registrar is empowered to vary, suspend or revoke licences and registrations upon cause\(^ {507}\) but this power shall not be exercised before the financial institution has been given an opportunity to make representations thereof.\(^ {508}\)

Under corporate governance, the appointment of directors and all executive officers and managers\(^ {509}\) of financial institutions is subject to the approval of the registrar.\(^ {510}\) The registrar is empowered to disqualify an executive officer or manager of a

\(^{500}\) Section 20(1) Financial Services Act ; but he may not delegate the ‘power of delegation’.  
\(^{501}\) Section 21(1)(a) Financial Services Act.  
\(^{502}\) Section 21(4) Financial Services Act.  
\(^{503}\) “Licence” is defined as a licence under the Act or another financial service law and “licensed” means licensed under the Act or under another financial service law whilst “registered” means registered under the Act or under another financial service law – s 2 Financial Services Act. There is no definition for “certificate”.  
\(^{504}\) After fulfilling any prior requirements.  
\(^{505}\) At the risk of being superfluous, the ‘licence’.  
\(^{506}\) However s 23 says that on an application the registrar may (a) grant a licence (b) register an institution or (c) grant renewal of such licence or registration. The implication of this would be that there is not much difference between the two terms, and yet it must not be so. It is submitted this may have been a drafting problem because a license and a registration are not the same although the Act allows either one of them to operate – see s 21(10(a).  
\(^{507}\) Section 27 Financial Services Act.  
\(^{508}\) Section 27(4). This is in tandem with the *audi alteram partem* rule which literally means ‘hear the other party’ – a cardinal rule in natural justice theory which has found its way into constitutional and administrative jurisprudence across the world and is a central part of Malawian administrative jurisprudence.  
\(^{509}\) All executive officers and managers of prudentially regulated financial institutions shall be resident in Malawi after their appointment – s 30(2).  
\(^{510}\) Sections 29(2) & 30(1) Financial Services Act. It is submitted that although this provision may override the flexibility in the Building Society Act.
prudentially regulated financial institution based on reason and prior notification to the institution.\footnote{Competence, business record or character, unsuitability to discharge the duties and responsibilities associated with the position – s 31(1). The notification allows the institution to make any representations prior to finalisation of the registrar’s decision – s31(2).}

Supervision and regulation of financial institutions is principally through directives issued by the registrar\footnote{Part V Financial Services Act.} but a directive may not be issued unless a draft directive has been brought to the attention of the targeted institutions\footnote{Published in a way that the registrar considers will bring it to the attention of financial institutions to which it will apply.} or the registrar consider on reasonable grounds that it is necessary to issue the directive urgently.\footnote{Section 34(4) Financial Services Act. The employment of ‘reasonable’ in this provision makes the decision amenable to judicial review under s 108(2) of the Constitution by the High Court on the ‘Wednesbury reasonableness’ test – on the application of this test on discharge of public authority see The State v The Chief Secretary to the President; Ex Parte Dr. Bakili Muluzi, Misc. Civil Application No 3 of 2011 (HC) Mzuzu Registry (unreported) where at 5 Chikopa J deals with the question ‘[i]s the decision unreasonableness in the Wednesbury sense?’} Any urgent directive issued without prior publication shall lapse after ninety days but may be reissued.\footnote{Section 34(5) Financial Services Act.}

Apart from directives, the registrar may also give directions to financial institutions including a director, executive officer or manager requiring it to give information to the registrar or publish such information as directed relevant to the performance of the registrar’s supervisory functions.\footnote{Section 35 Financial Services Act and also auditor, actuary or other related party. The Act does not define what a directive and what a direction is and both have force of law (s 2) but it is submitted a directive has more force than a direction although this may not always be the case. However s 39(1) gives credence to the argument that directions are more or less correctional in nature while directives may be viewed, without sounding harsh, as decrees. However directions may also require an institutions not only to correct but do some positive act, albeit some seen as intrusive, such as removal an auditor or actuary [s 39(2)(e)], not to borrow a specified amount [s 39(2)(f)] not pay dividend [s 39(2)(g)] remove or suspend any person including a director [s 39(2)(k)]. And person if need be.} But a direction that affects rights of a party may only be issued after the institution has been given notice of the proposed action specifying the grounds for it and facts supporting thereof and allowing the institution\footnote{Section 39(5) Financial Services Act.} to ask for a private hearing. The registrar may upon representations made to it [sic] modify or uphold any direction issued.\footnote{Section 39(6) Financial Services Act. The section gives an underlying direction to comply with the direction of the registrar despite anything in the institution’s memorandum or articles of association or regulations and despite any contract or arrangement to which it is a party – s 39(7). This prima}
have a strange provision that any such issued direction shall not be ground for
termination, repudiation or cancellation of a contract and a court may on application
by a party make an order relating to the effect of the direction on the contract
provided that such order may not require a person to take action that would
corravene the direction. It is submitted this is untenable as it purports to uplift the
direction of a registrar above the authority of the court and in the process oust the
jurisdiction of the court which by law must make an order as it sees fit in the interest
of justice, considering that the direction may indeed force a party to cancel, repudiate
or terminate a contract.

The registrar may by instrument in writing appoint examiners and investigators. An
examiner examines the affairs or any part of the institution to ensure compliance
whilst an investigator is appointed where the registrar has reasonable grounds to
believe that an offence has been committed, or there is no compliance or an
institution is involved in financial crime. Such investigators or examiners shall have
all the powers and protections of a commissioner under the Commissions of Inquiry
Act, on top of the indemnity they have under the FSAM.

For self-regulatory organisations (SROs) like the Malawi Stock Exchange, its rules
shall not be inconsistent with the FSL with respect to matters where the SRO has
supervisory functions but any such rules and amendments thereto shall be of no
effect unless approved by the registrar. An SRO shall also not amend its
memorandum or articles of association or other constituent documents unless

facie will have far reaching consequences as the registrar may be accused of micromanagement of
institutions and interference i.e. the tort of induced breach of contract.

Section 40 Financial Services Act.

In Malawi the doctrine of separation of powers is a Constitutional one and s 9 of the Constitution
says the judiciary shall have the responsibility of interpreting, protecting and enforcing this
Constitution and all laws and in accordance with this Constitution in an independent and impartial
manner with regard only to legally relevant facts and the prescriptions of law. S.8 deals with the
executive (under who the registrar falls) and the executive is responsible for the initiation of policies
and legislation and for the implementation of all laws which embody the of the executive express
wishes of the people of Malawi and which promote the principles of this Constitution.

Sections 41(1) & 42(1) Financial Service Act.

Sections 41(2) & 42(1)(a)(b)(c) Such examination and investigation involving visiting and entering
into the premises of the financial institution – ss 41(3)(a) & 42(3)(a).

Section 43 Financial Services Act [referring to the Commissions of Inquiry Act (Chap 18:01, Laws
of Malawi)].

Section 98.

Hereafter in the text referred to as SRO(s).

This denotes statutory delegation of supervisory authority to SROs.

Section 46 Financial Services Act.
approved by the registrar, notwithstanding any provisions in the Companies Act.\textsuperscript{529} The FSAM also provides an SRO, its employees and members indemnity for any loss sustained or damage caused to any person for \textit{bona fide} acts done by them.\textsuperscript{530} Under the FSAM, there is a forty-nine percent cap on shareholding by any one person or entity in a prudentially regulated institution.\textsuperscript{531}

Price fixing and price arrangement of financial service products may be prohibited if it is unfair to consumers, will tend to reduce competition, will result in exploitation of consumers or is otherwise undesirable.\textsuperscript{532} The registrar has to give prior approval for all compromises, arrangements and transfers of business of financial institutions without which the court shall make no order approving and such arrangements.\textsuperscript{533}

The registrar may place a prudentially regulated financial institution under statutory management on its own request or if it is not complying with the FSL, is financially unsound,\textsuperscript{534} involved in financial crime,\textsuperscript{535} refusing to submit itself to inspection by the registrar or has had its licence suspended or revoked.\textsuperscript{536} The purpose of this is to protect the interest of clients; stability, fairness and orderliness of the system as well as safety and soundness of financial institutions (avoid contagion).\textsuperscript{537} Where any such institution is placed under statutory management, the registrar or any other person appointed by him\textsuperscript{538} shall be the statutory manager.\textsuperscript{539} The public shall

\textsuperscript{529} Section 50 Financial Services Act.
\textsuperscript{530} Section 51 Financial Services Act.
\textsuperscript{531} Section 53 Financial Services Act. If on the commencement of the Act any institution does not meet this requirement it must within 6 months of operation of the law provide a credible plan to the registrar on how it will achieve this over a period not exceeding 5 years. The author, being a shareholder of a financial institution has had an experience where the majority holder vetoed any resolution and carried the day, including awarding themselves as a board exceeding high perks when the company is not doing well. This provision will surely put such abuse to a stop.
\textsuperscript{532} Section 63 Financial Services Act. Most of the financial institutions have associations i.e. Bankers Association of Malawi, Insurance Association of Malawi, Dealers Association of Malawi and usually when prices are announced for their products (be it interest rates of other costs), all the players in the industry will usually announce at the same time and adjust by the same margin to the same amounts. It is submitted that there is actually collusion amongst the various players to the detriment of consumers and it is hoped this provision can be enforced for consumer good.
\textsuperscript{533} Part VIII Financial Services Act. It is submitted that the criticism earlier on laid about the attempt to limit the jurisdiction of the Court applies here and this provision may need to be seen through the Constitutional prism under which the judiciary is enacted.
\textsuperscript{534} including engaging itself in unsafe and unsound financial practices.
\textsuperscript{535} The Finance Bank of Malawi was placed under statutory management because it was suspected of having not complied with the financial service law with elements of financial crime.
\textsuperscript{536} Section 68(2)(a) Financial Services Act.
\textsuperscript{537} Section 68(2)(b) Financial Services Act.
\textsuperscript{538} Mr Neil Nyirongo, a former Deputy General Manager (and later Executive Director of Economic Services) at the Reserve Bank, was made Statutory Manager of the embattled Finance Bank of Malawi and served as Curator and Caretaker Chief Executive Officer. See ZoomInfo available at
immediately be informed by the registrar of the placing of any institution under statutory management. The statutory manager shall have the management of affairs of the institution to the exclusion of its directors and other managers.

The task of the statutory manager is to manage the affairs of the institution with the greatest economy possible compatible with efficiency and as soon as practicable report to the registrar what steps need to be taken at the institution to ‘correct’ things up or if not practicable whether to transfer the business or to wind it up. It can therefore be inferred that although the law says the registrar may be the statutory manager, the law does not really envisage this situation as it would lead to an absurdity from a reporting perspective. The statutory manager is also not an independent manager in his own right as he has to comply with written directions from the registrar in relation to his functions. It is submitted that once a statutory manager has been appointed, the process will actually lead to clientele flight, lack of trust and most likely than not liquidation will be the end result.

A resolution to wind-up a prudentially regulated financial institution shall be of no effect unless approved by the registrar and an application to the court for an order to wind-up a prudentially regulated financial institution may only be made by the registrar or with his approval. It is argued that this provision as far as it purports to limit the court in hearing applications is open to legal challenge.

---

540 Section 68(5) Financial Services Act.

541 Section 69(2)(a) Financial Services Act.

542 Section 69(4) Financial Services Act.

543 This demonstrates in the author’s view that the drafters of the law did not fully apply their mind to the functions of a statutory manager.

544 Section 69(7) Financial Services Act. Although he can apply to the Court for directions, [s 69(8)] this may not in actual place happened because of his ‘subservient’ nature and the question is whether he can challenge the registrar’s directions in court considering that he may be removed at any time (for no reason) by the registrar – s 69(8).

545 This is exactly what happened in Finance Bank of Malaŵi.

546 Section 72 Financial Services Act.

547 Especially where it also states that the winding up shall be on such terms and conditions as the registrar may determine – s 72(3). This is language that is reserved for the courts after weighing all the circumstances of the case and deciding it in the interest of justice.
to be wound up, the registrar (again!) or any other person appointed or approved by the registrar shall be the liquidator.  

The registrar’s decisions are however subject to review by the financial services appeal committee (FSAC). Membership of the FSAC comprises three persons appointed by the minister, one of whom shall be designated as chairperson, who have at least ten years experience as legal practitioners or has the same number of years experience in the financial services industry who shall hold office for three years, subject to re-election. An application for review shall act as an automatic stay of any decision unless altered, set aside or replaced by the FSAC or where the parties have consented but with the consent of the FSAC. Parties to review proceedings are entitled to legal representation but the registrar shall be entitled as of right to be a party. The chairperson of the FSAC has the power to vary or revoke a direction. It is submitted that this power should not have been given to the chairperson but to the FSAC itself. Decisions of the FSAC shall be in writing and shall include the reasons, a statement of its findings and a reference to the evidence forming the basis of the finding.

It is yet to be seen how the FSAC operates in practice because of the very important position that the registrar holds, as governor of the central bank. Furthermore there is a presumption in favour of the registrar’s decision. The law says unless the decision of the registrar is not supported by reasonable evidence, the evidence shall be affirmed.

---

548 Where you have a Court ordered liquidation, this power is supposed to be exercised by the Courts.
549 Section 73(6) Financial Services Act and the liquidator is first in ranking of claims – s 73(6)(a).
550 Section 82 employs the word appeals though so it would seem the Committee has both review and appellate jurisdiction.
551 Section 78(1)(a) Financial Services Act. Costs will follow the event – s 78(3). The Financial Services Appeal Committee is hereafter in the text referred to as FSAC.
552 In Malawi legal practitioner is a term that denotes that one has been admitted to the bar. Malawi does not have solicitors or barristers. The year requirement is surprising but not extraordinary as it is the same requirement before one can be appointed to judgeship of the High Court. It may well be that the intention is to create a quasi-judicial review body with equally well versed practitioners (either as lawyers or financial service experts) as members.
553 Section 79 Financial Services Act.
554 Section 83 Financial Services Act. See also s 88 on the powers of the Appeals Committee.
555 Section 84(2)(3) Financial Services Act.
556 Section 85(3) Financial Services Act.
557 By majority – s 88(2) Financial Services Act.
558 Section 91(1) Financial Services Act. It would appeal from this that the decision would be akin to a well reasoned judgement.
559 Section 91(5) Financial Services Act.
The law also limits to appeals from the FASC to the court to only questions of law but in a somewhat contradictory provision states the court may hear and determine such appeals and make such order as it thinks fit to dispose of the appeal.

All financial institutions in Malawi are required to conduct a customer due diligence and report promptly to the Financial Intelligence Unit suspected money laundering activity related to any client or customer or any suspected illegal dealings inside or outside of Malawi. In its conclusion, the FSAM states that where a body corporate has committed an offence against the FSL, each director, employee or agent of the body shall (equally) be guilty of the offence and on conviction be liable to the same penalty unless established that he took reasonable precautions and exercised due diligence to avoid commission of the offence. It is submitted this is grossly unfair especially to mere employees, and it is open for legal challenge because of the manner in which it is framed.

Conclusion

Although Malawi has been independent for 47 years, it still remains a LDC and poverty is a key challenge. The financial sector is not very well developed and reflects Malawi’s size and economy. Banking dominates the financial sector and the stock exchange is illiquid. In summary the financial sector is still at a rudimentary stage with low public confidence.

---

560 Section 92(1) Financial Services Act.
561 Section 92(3). In Emison Phiri v Illovo Sugar Civil Appeal No 36 of 2008 (HC) the question was whether the Court should hear an appeal based on facts when the s 65 of the Labour Relations Act (LRA) provides appeals only on points of law. Madise J held citing the Constitution that the High Court has unlimited original jurisdiction to hear and determine any civil or criminal proceeding under any law. He said s 65 of the LRA tends to usurp the powers of the High Court to hear appeals from the IRC on matters of fact, in essence making the Industrial Relations Court (IRC) the final and binding arbiter. By making IRC to be the final arbiter in respect of matters of fact is tantamount to creating a tribunal which has concurrent jurisdiction with the High Court and the Supreme Court. He stated clearly that s 103 (3) of the Constitution does not allow this ‘[t]here shall be no courts established of superior or concurrent jurisdiction with the Supreme Court of Appeal or High Court.’ Lastly he said s 65 of the said Act is premised on the dangerous assumption that the IRC is immune from making errors of fact which is not so. It is therefore submitted that this provision may be challenged and considered impugning upon s 103(3) in the same manner.
562 Section 100(1) Financial Services Act.
563 Section 112 Financial Services Act.
This chapter has discussed the legal and institutional regulatory and supervisory framework currently operating in Malawi. The detailed discussion was important in order to bring to the fore the massive burden that the registrar of financial institutions has. An overview of the political economy under which the central bank operates was also done to illustrate the extent of the ‘executive clutches’.

The chapter made a brief exposé of the statutes that comprises the FSL.\(^{564}\) The FSL in Malawi is under the umbrella of the FSAM but contains many statutes, most of which have been enacted in the last 2 years. The effect of these pieces of legislation on conduct of business is likely to be felt in later years but it signals an intention by Malawi to properly regulate its financial sector. The chapter analysed the regulatory structure of the RBM and noted how it closely resembles the structure in the FSAM and concluded that this is by design. It has been observed that the RBM employs a narrow *silo* regulatory and supervisory model. However in practice this work is done by directorates in the central bank.

In a critical analysis of each of the financial service laws, the chapter also drew out some of the potential problems that the current legal, institutional and operational framework is likely to face, especially in view of constitutional supremacy and how the courts have tended to jealously guard any attempt to whittle down, oust or usurp their jurisdiction.

Under the FSAM the registrar has expansive powers to issue directives and directions as well as penalties. Decisions of the registrar are amenable to appeal to the FSAC and further, on points of law, to the (High) Court. In analysing the FSL, the chapter concluded that the law seems to have simply built up an ‘inverted pyramid’ as it has maintained the same institutional regulatory framework which has been there since independence. It has still retained the central bank as regulator of the financial service industry with its governor as the registrar.\(^{565}\) In view of the manner in which the governor and the board of the RBM are appointed, this raises issues of *regulatory, operational, budgetary* and *institutional* independence.

\(^{564}\) Except for Acts that have newly been enacted which were not available.

\(^{565}\) Except for the anomaly in Building Society Act.
CHAPTER FOUR

Nkowani said when looking at revisiting the regulatory framework for financial institutions in Malawi, there is need to consider developments that have taken place in the industry since the laws regulating the industry were first enacted.\textsuperscript{566} He admits that the infrastructure under the present framework is not well suited to developments of the years hence the need to align it to reflect these changes.\textsuperscript{567}

Malawi has enacted some new legislation in the financial sector\textsuperscript{568} but as was seen in the previous chapter, this has not resulted in the expected realignment. Furthermore as Mwenda stated, it is important to determine the size and structure of the industry, the role of the regulator as well as take consideration of economic, political, legal and historical consideration when designed a regulatory framework.\textsuperscript{569}

One thing that comes out clearly in chapter three is that the registrar of financial institutions is a very busy person. He has to regulate over a very wide range of services as well as undertake statutory management if need be.\textsuperscript{570} The current structure also presents itself susceptible to political machinations and this is not only from a historical perspective but has also been legally entrenched in the statutes.\textsuperscript{571}

Looking at the models of financial services regulation discussed in chapter two and the prevailing statutory and regulatory framework in Malawi discussed in chapter three, three models are proposed:

\textsuperscript{566} Nkowani Z ‘Supervision of banks and financial institutions in Malawi’ (2008) MLJ 49 at 54 (hereafter Nkowani Z (2008)).
\textsuperscript{567} Nkowani Z (2008) 54.
\textsuperscript{568} Mostly within the period 2009-2011.
\textsuperscript{569} Mwenda KK (2006) 6.
\textsuperscript{570} Including managing any liquidation processes.
\textsuperscript{571} Such as giving the President the exclusive power to appoint the governor of the Reserve Bank of Malawi (RBM) who is the regulator as well as the RBM’s Board.
4.1. **Unified Financial Services Regulator (UFSR)**

The current regulatory framework as represented in fig 5 above illustrates that Malaŵi uses the single peak unified regulator. When compared to the models discussed in chapter two, it would seem that this closely resembles the Financial Service Authority (FSA) of the UK except that in the case of Malaŵi the regulator is part of another structure and is not ‘the structure’. The following diagram illustrates a proposed UFSR:

![Diagram](image)

**Fig 7.** Proposed structure of a Unified Financial Services regulator.

To be independent, this structure needs to be rooted out of the Reserve Bank of Malaŵi (RBM) and become an independent self-standing agency. The legislative framework can then be amended to effect this ‘transplantation’ and also provide for the appointment of a supervising board to oversee the operations. To achieve this, the following must be considered:

4.1.1. **Regulatory independence**

The law already gives the regulator wide autonomy in regulating the financial sector. The regulator also already has ample discretion to set and change regulations within the financial services law (FSL). It is therefore submitted that the current legislative framework does provide for regulatory independence under this model.

---

572 The Financial Services Act 2010 and other financial services laws.
4.1.2. Supervisory independence

The current framework does provide for some supervisory independence subject to the executive’s exclusive power of appointment. It is therefore submitted that under the UFSR, supervisory independence may in reality be achieved because of an independent governance structure. It is further proposed that supervisors be adequately compensated and these perks be such that they can attract and keep competent staff and avoid bribery and corruption. The current statutory framework giving the regulator sole authority to grant and withdraw licences is well suited to achieve supervisory independence.

4.1.3. Institutional independence

To create institutional independence, the UFSR needs to be an agency that is at arm’s length reach of the executive and legislative branches of government. This does not only entail having the UFSR as a separate agency, but senior personnel should enjoy security of tenure and clear rules must be laid down governing their appointment and especially dismissal. It is proposed that appointments to senior positions be made by an independent board and membership of this board be on a representative basis.

4.1.4. Budgetary independence

The UFSR may require seed money from the state to start and run and this may be so for a few years before it is self-sustaining. It is therefore proposed that the proposed board of the agency approves the budgetary needs and the regulator be allowed to justify its budget before Parliament. This would prevent unnecessary executive interference as opposed to the agency’s budget being tabled as an appendage to the executive’s. It is however proposed that the regulator would need

573 Such as authority to investigate and visit institutions and revoke licences as well as indemnifying them – s 98 Financial Services Act.
574 Indeed all officers of the UFSR
575 Quintyn M & Taylor MW ‘Should Financial Sector Regulators be Independent?’ IMF Economic Issues No 32, 2004 (hereafter Quintyn M & Taylor MW (2004)).
576 Except for the curious case of the Building Society Act [Chap 32:01] which gives the Minister veto powers over licences - s 8(4)(a)(b) Building Society Act.
579 Representative of the stakeholders. This is not a new phenomenon in Malawi. The Technical, Entrepreneurial and Vocational Education and Training Authority (TEVETA) Act 1999 & the Malawi Communications Regulatory Authority (MACRA) Act 1994 provide for this representative appointment in the boards. MACRA is the Communications regulator whilst TEVETA regulates and oversees technical and vocational training in Malawi.
580 Other governance institutions such as the Anti Corruption Bureau enjoy this budgetary independence in Malawi.
to put in place strategies of ensuring the collection fees from the industry for its services to become self-sustaining. The current FSL already allows the registrar to do this and there would be no need for statutory changes to effect this. In fact the law presumes that the regulator may operate on fees charged for his services. However, there is need to ensure that this does not lead to “industry capture” and this can be achieved through a transparent governance structure. The example of the self-sustaining Malawi Communications Regulatory Authority may be emulated and can counter the fear of the regulator strapped for funds. The current framework allows senior staff to recruit subordinate staff.

Summary

The current framework provides regulatory independence for a UFSR. To achieve true supervisory independence, the exclusive authority of the President to appoint the registrar would have to be removed and assigned to a transparent representative board. The current framework already provides the regulator with the authority to grant and withdraw licences. The UFSR staff will have to be adequately compensated in order to attract and keep competent staff and avoid bribery and corruption. To achieve institutional independence would require setting up the UFSR as a separate agency with an independent representative board as part of its governance structure. Senior staff must be appointed by this board and enjoy security of tenure. Finally the UFSR must be able to formulate and justify its budget through the regulator and where state funding is provided, the regulator should justify his budget to parliament.

581 But it must be noted that there is an implied reliance on the basic structure of the RBM supporting the registrar - s 8(3) Financial Services Act. The RBM is also enjoined to support the registrar in carrying out his functions – s 9(1).
583 The MACRA is perceived to be a very rich organisation in Malawi, and it does act so!
584 Quintyn M & Taylor MW (2004). It is submitted that the financial sector in Malawi is ‘bigger’ and more profitable than the communications industry which has few players; the key lies in the proper fees structure.
585 Section 11 Reserve Bank of Malawi (RBM) Act.
586 Although under the law the registrar is not directly appointed by the President; by law the governor who is the registrar is appointed by the President – s 11 RBM Act.
587 Except the case of Building Society Act discussed above.
588 Based on the MACRA ‘success’ story, the financial sector in Malawi is capable of supporting the budgetary requirements of the UFSR but suffice to say that although MACRA is seen as financially self-sustaining, questions arise as to whether it is an independent institution.
To achieve this will require some statutory amendments as well as major institutional setup and changes. However, a more important requirement will be a change of culture\textsuperscript{589} and a lot of political will\textsuperscript{590}.

4.2. Triple Peak Financial Services Regulatory System (TPFSRS)

As discussed in chapter three, although the regulatory framework is structurally represented in fig 5 above, the practical framework is that the three directors are the \textit{de facto} regulators\textsuperscript{591}. The TPFSRS is premised on making these directorates independent regulatory agencies. When compared to the models discussed in chapter two, it would seem that this bears some resemblance to the twin peak model employed in Zambia\textsuperscript{592}. The following diagram illustrates a proposed TPFSRS:

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{fig8.png}
\caption{Proposed structure of a Triple Peak Financial Services Regulatory System.}
\end{figure}

Like the UFSR, to be independent, the TPFSRS structure needs to be rooted out of the RBM and become independent agencies. This will require a great deal more legislative amendment as the current statutory structure concentrates all regulatory

\begin{itemize}
\item The change will mainly involve the fact that there has been the ‘transplantation’ otherwise the structure would be much similar to what is currently in the RBM but this time operating as a separate agency.
\item Political will as used in this context is in the broader context and includes politicians, the executive, the legislature, business captains and the governance structure within the RBM.
\item Of the industry that falls under them.
\item But not exactly because the Bank of Zambia regulates the banks (and other financial institutions) whilst the Pensions and Insurance Regulator is the other one – see Mwenda KK (2006) 46.
\end{itemize}
and supervisory powers in the regulator of financial services.\textsuperscript{593} However, most of the laws regulating the financial services\textsuperscript{594} do provide for a registrar of that industry and what may be required is an amendment that devolves the concentrated power to the three agencies.

It is proposed further that to ensure that there is coordination in the financial services, taking into consideration the current status of the financial system,\textsuperscript{595} the three agencies must work together under a common board of directors, say a board of financial service regulation (BFSR). The duties of the BFSR would be to oversee operations of the three agencies from a macro level.\textsuperscript{596} The BFSR would be a transparent body composed of industry level representation\textsuperscript{597} and independent to prevent executive ‘hijack’.\textsuperscript{598} Each of the agencies would have its own autonomous local board but the BFSR would be for policy formulation and regulating for the whole financial sector.

4.2.1. Regulatory independence
Like the UFSR, the law already gives the regulator wide autonomy in regulating the different industries.\textsuperscript{599} The regulator also already has ample discretion to set and change regulations within the regulated industry.\textsuperscript{599} It is therefore submitted that, subject to minor amendments,\textsuperscript{600} the current legislative framework does provide for regulatory independence under this model.

4.2.2. Supervisory independence
Similarly to the situation under UFSR above, the current framework does provide for some supervisory independence\textsuperscript{601} under the TPFSRS but it is proposed that the powers specifically provided for in the Financial Services Act 2010 (FSAM), such as examination and investigation need to be devolved and be included in the respective

\textsuperscript{593} The RBM.
\textsuperscript{594} Insurance Act, Banking Act etc.
\textsuperscript{595} Still rudimentary and dominated by banking.
\textsuperscript{596} But leaving micro management to boards of each agency.
\textsuperscript{597} In this case of the financial service.
\textsuperscript{598} Or even ‘sectoral’ hijack.
\textsuperscript{599} The Financial Services Act and other financial services laws.
\textsuperscript{600} Devolving the power of the registrar including the issuance of directives – see s 34 Financial Services Act.
\textsuperscript{601} Such as authority to investigate and visit institutions and revoke licences as well as indemnifying them – s 98 Financial Services Act.
legislation regulating each of the three silos.\textsuperscript{602} It is further proposed that each regulator be accountable to a representative board. The BFSR will therefore be tasked with oversight of the three agencies.\textsuperscript{603} The agencies must be able to attract and retain competent staff and offer enough perks to avoid bribery and corruption. Because the most likely scenario would involve a ‘transplantation’ of staff,\textsuperscript{604} the issue of uniformity of perks amongst the three agencies may have to be addressed, especially considering the unequal ‘wealth distribution’ amongst the regulated industries.\textsuperscript{605}

The current statutory framework in each of the legislation giving the regulator sole authority to grant and withdraw licences is well suited to achieve supervisory independence for each agency but where the law grants this authority to the registrar of financial services, this power may have to be devolved.

4.2.3. Institutional independence
The TPFSRS clearly is premised on three separate agencies. Compared to the UFSR, it may be argued that the TPFSRS provides more independence because of its ‘multiplicity effect’ and may provide better arms length reach from the executive and legislative branches of government. Like UFSR, senior personnel should enjoy security of tenure and clear rules must be laid down governing their employment. It is similarly proposed that appointments to senior positions of each agency be made by an independent representative board of the regulated industry.

4.2.4. Budgetary independence
Because of the ‘fragmentation effect’, the TPFSRS may require much more resources and on a longer basis before each agency can attain self-sustenance. There is also a danger that some of the agencies may never achieve this in the short to medium term.\textsuperscript{606} In this case the need for the ‘local’ board to approve the

\begin{footnotesize}
\textsuperscript{602} See ss 41, 42 & 43 Financial Services Act.
\textsuperscript{603} This may be crucial to avoid contagion as well as share best practices in the financial system.
\textsuperscript{604} The most practical situation would be to ‘transplant’ key staff from the RBM already involved in financial regulation and supervision.
\textsuperscript{605} The banking agency being obviously the ‘wealthier’ and the pension regulator being of a new industry may require assistance.
\textsuperscript{606} It is submitted that only the agency regulating banking and other similar institutions may be truly self-sustainable.
\end{footnotesize}
budgetary needs and the regulator to justify its budget before Parliament is even more paramount.

Because of the uneven ‘distribution of wealth’ amongst the three agencies, although each regulator may be authorised to collect fees, the danger of ‘industry capture’ may be greater with TPFSRS and may require vigilance on the part of the governance structure. This is where the BFSR may prove useful in providing oversight.

Summary

Subject to minor statutory amendments, the current framework provides regulatory independence for TPFSRS. Because under this model, the governor is no longer the registrar, the exclusive authority of the President to appoint the registrar automatically ceases to have its dreaded effect. However three separate agencies will have to be instituted and may need longer support from the state before they can become self-sustaining.607 The law by and large provides for granting and withdrawal of licences within each industry but where this power is concentrated in the registrar of financial services, this will need to be devolved through legislative amendments. Each of the agencies will have to ensure adequate compensation in order to attract and retain competent staff and avoid bribery. Uniformity of perks may be a key solution to achieving morale and avoid ‘cross-over’ of staff. To achieve institutional independence, each agency would need an independent representative board as part of its governance structure, subject to a BFSR. The ‘local’ boards must appoint senior staff and the staff must enjoy security of tenure. Finally each of the agencies must be able to formulate and justify its budget and because it is envisaged that state funding may be required for a longer period, the regulator should justify its budget before parliament.

To achieve this model will require a considerable more statutory changes as well as major institutional setup and changes. Since this would be a completely different setup to that which is currently in place, the need for culture change and political will is ever greater.

607 And some may never be.
4.3. Imbedded Triple Peak Financial Services Regulatory System (ITPFSRS)

This model proposes maintaining the regulation and supervision within the RBM but making the three *de facto* registrars (directors) to be the *de jure* registrars of the industry that falls under them. The registrars would still be within the RBM structure but would have legal authority in their own right and the governor and board of the RBM would provide oversight. The ITPFSRS would look like:

![Diagram of proposed structure of ITPFSRS](image)

**Fig 9.** Proposed structure of an Imbedded Triple Peak Financial Services Regulatory System

Because the ‘ITPFSRS’ structure is imbedded within RBM, it would not require as many legislative amendments. However key would be the devolution of power from the governor (the current *de jure* registrar) to the three registrars (the current *de facto* registrars). The RBM would still maintain its function as overall regulator of the financial services but each registrar would be given autonomy to regulate the industry subject to oversight of the governor and board. This model requires the least changes as it will mainly involve a functional review.

4.3.1. Regulatory independence

Since the law already gives the regulator wide autonomy in regulating the different industries, regulatory independence is likely to be achieved. Subject to minor amendments, especially devolution of power from a single regulator, the current legislative framework does provide for regulatory independence under this model.
4.3.2. Supervisory independence
Like the two models proposed above, the ITPFSRS does provide for some supervisory independence but it is proposed that the powers specifically provided for in the FSAM for the registrar of financial services be devolved and be included in the respective legislation regulating each of the three silos. To ensure that the registrars have operational autonomy, it is proposed that their appointment be made by an independent financial body comprising stakeholders in that industry, appointed on a transparent and representative basis with the involvement of the RBM. This is in taking cognisance of the fact that under the RBM structure, the registrars would be under the governor. It is further proposed that the registrars report directly to the governor and not through an intermediary.\(^6\) The need to attract and retain competent staff and offer enough perks to avoid bribery may be a challenge because of the fact that the structure is embedded within a pre-existing structure. The advantage though is that it would not involve ‘transplantation’ of staff.\(^7\) It is proposed that each registrar be encouraged to build reserves that can assist in the autonomic operation of each regulator. The current statutory framework in each of the legislation giving the regulator sole authority to grant and withdraw licences is well suited to achieve supervisory independence for each agency but where the law grants this authority to the registrar of financial services, this power may have to be devolved.

4.3.3. Institutional independence
This may be done in two ways, having regulators outside the physical buildings of the RBM or creating space from within. The latter is easier as it involves fewer changes. The former is more involved but has been done before with MALSWITCH and the MSE.\(^8\) Compared to the above two models, the ITPFSRS may be regarded as the least independent but would still pass muster compared to the current regulatory setup. The issue of security of tenure of senior personnel may be tricky and may be safeguarded if the route chosen is have the regulators detached from the operating

\(^6\) See fig 4 & 5 above, the Directors report through the General Manager, Supervision of Financial Institutions.

\(^7\) But more like relocation or transferring.

\(^8\) ‘Malawi Switch Centre (MALSWITCH) was established by the RBM to facilitate the implementation of a clear, secure and guaranteed electronic payment infrastructure in Malawi in line with the overall objectives of the National Payment System Modernization Programme.’ – MALSWITCH available at http://www.malswitch.com/ (accessed 3 May 2011). The Malawi Stock Exchange (MSE) was also created initially as an appendage of the RBM until it was able to stand on its own. Shareholders of MSE are RBM & Malawi Government – see ‘Malawi Stock Exchange – Company Profile : Shareholding’ available at http://www.mse.co.mw/prof-share.html (accessed 3 May 2011).
offices of RBM whilst remaining within its wings.\textsuperscript{611} Because of its imbedded nature, institutional independence would be measured against the RBM’s own independence unless the regulators were detached and separated.\textsuperscript{612}

4.3.4. Budgetary independence

It is proposed that if the registrars are physically separated from the RBM (but still under its wings) then each registrar be allowed to justify his own budget to a representative board overseeing their operations.\textsuperscript{613} Even in a situation where the registrar is not separated, the registrar should be able to formulate his budget and defend it to the board of the RBM. In this model, the dangers of the “regulator(s)” running out of funds\textsuperscript{614} or ‘industry capture’ do not arise. Compared to the above two models, this model offers the least budgetary independence.

Summary

This model proposes preserving the current status quo but subject to a key fundamental change of delinking the registrar from the governorship. Because the RBM would be retained as the overall regulator, the existing legislative framework would not have to be changed to ensure regulatory independence for ITPFSRS except the devolution of power. Furthermore, as the governor is no longer the registrar, direct political influence may be somewhat be diminished.\textsuperscript{615} Setting up the ITPFSRS is the least costly as it is premised on the current setup with a few structural and institutional changes. The law would have to be changed to devolve the power to grant and withdraw licences within each industry to the respective registrars. The issue of perks is however likely to be a tricky one unless the registrars are separated from the RBM’s offices. Although operating under the RBM, the registrars must be able to formulate and justify their budgets.\textsuperscript{616}

\textsuperscript{611} As in MALSWITCH or MSE. Even now, the MSE and MALSWITCH share the old RBM Blantyre Branch.
\textsuperscript{612} MSE and MALSWITCH have been able to build up separate corporate images detached from the RBM even though they may for all purposes be ‘owned’ by the RBM.
\textsuperscript{613} Both MALSWITCH & MSE have separate Boards. For the board of the Malawi Stock Exchange see ‘Malawi Stock Exchange – Company Profile : Shareholding’ http://www.mse.co.mw/prof-share.html (accessed 3 May 2011).
\textsuperscript{614} Unless the RBM itself has financial difficulties.
\textsuperscript{615} It may still be indirectly exercised.
\textsuperscript{616} Either to a (hopefully representative) board if separated or to the RBM Board if fully imbedded.
To achieve this model will require minor legislative changes and minimal institutional changes.\textsuperscript{617} Since it is a setup that does not propose significant changes, there is no need for a culture change and the political will required will also be less.

**Conclusion**

This chapter has discussed three proposed regulatory frameworks for the financial sector and has considered the statutory, institutional and structural changes that may need to be undertaken. The chapter used the ‘independence’ yardstick to analyse the three proposals as well as the effects on the political and business establishment. In dealing with these proposals the chapter also looked at the possible advantages and disadvantages of each model.

The UFSR provides the most independence whilst the ITPFSRS provides the least. The ITPFSRS and TPFSRS preserve the *status quo* in terms of business culture. In terms of costs, the TPFSRS is the most costly\textsuperscript{618} because it involves the creation of three separate agencies. Although the ITPFSRS strongly resembles the present regulatory setup, the major difference is that it devolves\textsuperscript{619} the registrar’s power from one person. The most fundamental change may be the removal of the governor as registrar of financial services in all three models.

In the next chapter the three proposed models are further analysed in the context of the situation in Malawi and recommendations are made depending on what may be achievable and practical by looking at the advantages and disadvantages of each model.

\textsuperscript{617} Unless the decision is to house the registrars separately, then this may require institutional capital to set up.

\textsuperscript{618} Financially and institutionally.

\textsuperscript{619} This in truth is the case for all the models.
CHAPTER FIVE

5. Conclusion and Recommendations

The Malawi financial sector is regulated under the Reserve Bank of Malawi (RBM) and its governor is the statutory regulator of the financial services sector. The thesis has shown that historically, the governor and the RBM have and continue to be under executive authority and they may not pass muster as independent institutions. The influence of the executive has also been shown to be more evident in multi-party Malawi. The thesis also examined financial regulatory models and made a comparative review of the United Kingdom and Zambia because of the historical ties that these two have with Malawi as well as the pioneering role of the UK’s Financial Service Agency (FSA). The thesis also critically analysed the statutory framework of the financial service sector and isolated some of the issues that are likely to become topical issues or form the basis of legal challenges. In doing this, the thesis has also demonstrated the full role of the registrar of financial services (as required in the various financial services laws) and concluded that the registrar has a lot of responsibilities which the law requires of him. Considering that the registrar also has to govern the central bank, the thesis looked at models that would allow the governor to govern and the possibilities of freeing the RBM from being in the mix of things. The thesis then identified three possible frameworks under which the financial service sector in Malawi may be independently regulated. In summary the three models offer the following:

Independence:

5.1. Unified Financial Services Regulator (UFSR):
   5.1.1. Offers regulatory independence.
   5.1.2. Offers institutional independence.
   5.1.3. Offers budgetary independence.

5.2. Triple Peak Financial Services Regulatory System (TPFSRS):
   5.2.1. Offers regulatory independence.
   5.2.2. Offers institutional independence.
   5.2.3. Offers budgetary independence but subject to weaker regulators failing to stand on their own and more susceptible to industry capture.
5.3. Imbedded Triple Peak Financial Services Regulatory System (ITPFSRS):
   5.3.1. Offers regulatory independence.
   5.3.2. Its institutional independence is tied to RBM independence.
   5.3.3. Offers no real budgetary independence.

Political will, culture change, legislative and institutional changes:

5.4. UFSR:
   5.4.1. Requires a lot of political will
   5.4.2. Requires an adaptation of culture.
   5.4.3. Needs legislative changes in most of the financial services law and also to create a new institution.
   5.4.4. Requires major investment in institutional setup and structural changes
   5.4.5. Costly.

5.5. TPFSRS:
   5.5.1. Requires a lot of political will
   5.5.2. Needs a complete culture change
   5.5.3. Needs legislative changes in most of the financial services law and also to create three separate institutions.
   5.5.4. Requires much more investment in setting up three institutions.
   5.5.5. Most costly.

5.6. ITPFSRS:
   5.6.1. Requires less political will
   5.6.2. No need for a cultural change (business as usual)
   5.6.3. Minor regulator changes (fundamentally involving removing the governor as registrar but still retaining overall regulatory control within the RBM).
   5.6.4. Minor institutional and structural changes.
   5.6.5. Least costly.
RECOMMENDATIONS

From an independence point of view, UFSR is the best model as it scores highly amongst all the independence ‘yardsticks’ used in this survey. ITPFSRS is the least independent. TPFSRS offers independence except that it is more susceptible to ‘industry capture’ or becoming a burden on the state.

From an economic, cultural and political viewpoint, ITPFSRS is the most attractive as it still preserves some form of political control with the executive, is the least costly and preserves the status quo in terms of business culture. The TPFSRS is the most costly and in terms of business culture requires fundamental changes as it creates three separate structures. The UFSR requires relinquishment of political control and cultural adaptation. It is less costly than TPFSRS but much more costly than ITPFSRS.

As was seen in chapter three, the registrar of financial services in Malawi has a lot of work. When one considers that the registrar is also the governor and looking at the functions of the RBM, it becomes clear that the RBM and the governor are overloaded with functions and for this reason both UFSR and TPFSRS would free the governor and the RBM from regulatory functions and allow the RBM to concentrate on its role as a Lender of Last Resort (LOLR). Another benefit also accrues from the RBM delinking itself from regulation. During a financial crisis, one would want the RBM to come in not only as a LOLR but also with monetary policies together with fiscal policies of treasury that may contain the situation or at least prevent and arrest contagion. Should the RBM be involved in regulation and active running of troubled institutions, as was the case with Finance Bank of Malawi, the RBM may become involved in the financial ‘mess’ itself and there might be no one to offer a rescue package.

---

620 Economic in the ‘narrower and immediate expense’ sense since in the broader sense having an independent institutional may be also economical.
621 UFSR is premised in uprooting the structure and ‘transplanting’ it elsewhere whilst ITPFSRS is improving on the already existing structure where it is.
622 UFSR and TPFSRS are compared using economies of scales.
It would therefore seem that freeing the RBM from its regulatory functions may benefit the financial system from an independent viewpoint as well as allowing the RBM to independently oversee the operations of the financial services sector as it manages monetary policy.

Looking at the three models, UFSR is the recommended model to ensure that Malawi has an independent financial regulatory system. However, in view of the legal, historical, political and economic context of Malawi, it is conceded that UFSR is unlikely to attract approval or the necessary political will to have it implemented.\textsuperscript{624} It may therefore be said that TPFSRS would offer a better alternative. However, considering the cost of its implementation, it is submitted that this may not be an attractive model at the moment.

It is therefore recommended that Malawi implements the ITPFSRS because although it does not offer the requisite independence, it is the least costly, requires the least change in culture and most importantly requires the least political will.

There is also an added benefit is starting with ITPFSRS. The fact that some control has been relinquished may provide an impetus for future regulatory changes and it is submitted that a transition can then be made to TPFSRS and eventually to the ‘ideal’ UFSR. However, there is nothing to prevent a transition from ITPFSRS straight to UFSR should the political will be there because in terms of costs, UFSR is less costly than TPFSRS.

Although TPFSRS looks the least difficult to implement, it also requires that the governance structure within the RBM accept and recognise the enormity of the task that the governor has and that devolving of power will not weaken but strengthen the institution and make it more efficient. It is therefore recommended that the model may easily be acceptable if it is perceived as having arisen from a ‘needs analysis’ of the RBM.\textsuperscript{625}

\textsuperscript{624} Recent events in multiparty Malawi have shown, except for the period 2004-2009, the ruling political party has an absolute majority of legislators and the enacted laws are usually reflective of the political policies of the government in power.

\textsuperscript{625} The political will of the RBM governance structure and its controlling interests.
Recommendations for further research

i. If any of the proposed models were to be adopted, what would be the actual legislative, institutional and structure requirements to make them or any part of them operational? Furthermore, can a hybrid model be moulded out of the proposed models?

ii. Alternative capital markets; why has the Malawian business community not caught the ‘bug’?

iii. The relationship between securities trading and development and whether in Malawi the prevailing theories that stock markers lead to development hold.\(^{626}\)

iv. Regional stock markets and how Malawi can benefit from a regional stock market and cross-listing.

v. Reform of the Reserve Bank of Malawi to make it more independent and accountable.\(^{627}\)

vi. Review of the New Building Society Act to bring it in line with the new financial service law in Malawi.\(^{628}\)

vii. Reviewing the breadth of the financial service law to ensure that its provisions are in line with the Constitution.\(^{629}\)

viii. Regulating shareholding of financial institutions.\(^{630}\)

In conclusion it is submitted that whilst the proposals and recommendations made in this thesis may not be implemented as presented, it is hoped the thesis has contributed to the knowledge and debate on the subject and may provide at least a framework on which needed regulatory changes may be implemented in the financial services sector in Malawi or from which further research and studies can be undertaken.

---

\(^{626}\) Considering the low yield on the MSE and that most companies are having their stocks effectively ‘devalued’ by trading.

\(^{627}\) Using Parliament as accountability body especially regarding the appointment and tenure of the governor and the board.

\(^{628}\) Especially as it is the only law that designates the Minister as the person to appoint a registrar of building societies and in so doing the registrar has appointed the Secretary to the Treasury, the top financial civil servant.

\(^{629}\) In Malawi an Act does not have to be ‘vetted’ by the Constitution Court as is the case in South Africa and any offending law is challenged by application to the High Court – ss 5 & 108 Constitution of Malawi 1994.

\(^{630}\) Section 53 The Financial Services Act provides a 49% cap but there is an ambiguity as to whether this only applies to shares held by individuals or entities.

(D) LIST OF BOARD MEMBERS OF THE RBM

Dr. Perks Ligoya  Governor
Mrs. Mary Nkosi  Deputy Governor
Mr Ted Sitimawina  Secretary for Economic Planning & Development (now Development Planning & Cooperation) *(ex-Officio)*
Dr Patrick Kambewa  Economics Professor (University of Malawi)
Mr. Joseph Mwanamveka  Secretary to the Treasury *(ex-Officio)*
Mr. Gautoni Kainja  Legal Practitioner (private sector)
Mrs. Betty Mahuka  Accountant (private sector)

Note: designation of representative of private sector comes from the author’s knowledge of these Board members. Mr. Kainja is Senior Partner in Kainja & Dzonzi whilst Mrs. Mahuka is Director of Finance at the ESCOM Ltd.

(E) LIST OF GOVERNORS WHO HAVE SERVED AT THE RBM

Dr. Perks Ligoya  2009-Present
Mr. V. Mbewe  2005-2009
Dr. E.E. Ngalande  2000-2005
Dr. M.A.P. Chikaonda  1995-2000
Hans Joachim Lesshaft  1988-1992
L.C. Chaziya  1984-1986
D.E. Thomson  1968-1971
A.G. Perrin  1968

Note: All the Governors are/were Malawian except Perrin, Thomson and Lesshaft.
